Disclosure Report 2023

pursuant to Part Eight
of the Capital Requirements Regulation (CRR)

Contents

1.	Introduction.....	4
1.1.	Overview of non-applicable disclosures.....	5
1.2.	Disclosures in other published reports.....	5
2.	Risk Management Objectives and Policies.....	5
2.1.	General information on risk management strategies and policies.....	5
2.2.	The Structure and Organisation of the Relevant Risk Management Functions.....	9
2.3.	The Scope and Nature of Risk Reporting	11
2.4.	The Policies for Hedging and Mitigating Risk, and the Strategies and Processes for Monitoring the Continuing Effectiveness of Hedges and Mitigants.....	11
2.5.	A Declaration Approved by the Management Body on the Adequacy of Risk Management Arrangements of the Bank.....	12
2.6.	Risk statement approved by the management body succinctly describing the relevant Group's overall risk profile associated with the business strategy.....	12
3.	Governance Arrangement.....	13
3.1.	Directorships held by members of management body	14
3.2.	Recruitment policy for the selection of members of the management body.....	15
3.3.	Policy on diversity with regard to the selection of members of the management body, the objectives and targets set out in that policy, and the extent to which they have been achieved	17
3.4.	Information on separate risk committee and the frequency of the meetings	18
3.5.	Information Flow on Risk to the Management Body.....	18
4.	Scope of Application	18
4.1.	Differences in the scopes of consolidation.....	19
4.2.	Reconciliation of regulatory own funds to the IFRS balance sheet	20
4.3.	Impediments to fund transferst.....	22
4.4.	Potential capital shortfalls in unconsolidated subsidiaries.....	22
5.	Own Funds	23
5.1.	Own Funds composition, prudential filters and deduction items	23
5.2.	Reconciliation of regulatory own funds to the balance sheet according to IFRS.....	27
5.3.	Description of the Main Features of the Instruments of Individual Categories of Capital Issued by the Bank	28
6.	Own funds requirements and risk-weighted exposure amounts	29
6.1.	Summary of the Approach to Assessing the Adequacy of Internal Capital to Support Current and Future Activities	29
6.2.	Risk-weighted exposure amounts and minimum capital requirement	32
7.	Exposure to Counterparty Credit Risk	33
7.1.	Segregated and unsegregated collateral received and posted per type of collateral	35
7.2.	Derivative and securities financing transactions.....	35
7.3.	Transactions subject to own funds requirements for CVA risk.....	35
7.4.	Exposure value to central counterparties and the associated risk exposures	36
7.5.	Notional amounts and fair value of credit derivative transaction	36
7.6.	CCR exposures by regulatory exposure class and risk weights.....	37
8.	Capital Buffers.....	37
9.	Exposures to Credit Risk.....	39
9.1.	Qualitative disclosure requirements related to credit risk	39
9.2.	Definitions for Accounting Purposes of "Past Due" and "Impaired" and "past Due" and "Default"	39
9.3.	Description of the Approaches and Methods Adopted for Determining Credit Risk Adjustments	40
9.4.	Overview of performing, non-performing and forborne exposures for loans, debt securities and off-balance-sheet exposures.....	42
9.5.	Overview of Collateral obtained by taking possession and execution processe	44
9.6.	Ageing analysis of accounting past due exposures.....	45
9.7.	Gross carrying amounts defaulted and non-defaulted exposures, accumulated specific and general credit risk adjustments, accumulated write-offs taken against those exposures and net carrying amounts and their distribution by geographical area and industrytype and for loans, debt securities and off-balance-sheet exposures;	46
9.8.	Breakdown of loans and debt securities by residual maturity	48
10.	Encumbered and Unencumbered Assets.....	48
11.	Use of Standardized Approach.....	51
11.1.	Use of external ratings.....	51

1. Introduction

Agri Europe Cyprus Limited Group publishes Disclosure Report based on figures as of 31st December 2023 in accordance with Article 13 of the Regulation No.575/2013 of the European Parliament (Capital Requirements Regulation or CRR).

Agri Europe Cyprus Limited Group (AEC Group or Group) consists of the following members:

- AGRI EUROPE CYPRUS LIMITED, Cyprus (AEC) as a parent company, and
- NORD AGRI N.V., Netherland as subsidiary,
- M&V INVESTMENTS a.d. Beograd, Serbia as subsidiary,
- GORENJSKA BANKA d.d. Kranj, Slovenia as credit institution subsidiary,
- GB Leasing d.o.o. Ljubljana, Slovenia, as a subsidiary,
- AIK BANKA a.d. Beograd, Serbia as credit institution subsidiary,
- EUROBANK DIREKTNA a.d., Beograd as credit institution subsidiary

On March 2nd, 2023 AIK Bank has signed a Share Purchase Agreement (SPA) with Eurobank S.A Athens, Greece, acquiring 100% ownership of Eurobank Direktna a.d., Belgrade. After obtaining the consent of National Bank of Serbia and other regulatory authorities, the AIK Bank has officially become the sole owner as of November 2nd, 2023. In the period until integration, both banks are continuing to operate as two separate entities without any changes that would affect the clients and the services that these banks provide to them.

AEC Group Disclosure Report meets disclosure requirements of Part Eight of CRR and all following amendments (Regulation (EU) 2019/876 (CRR2) of the European Parliament and of the Council of 20 May 2019 amending Regulation (EU) No 575/2013 and other relevant regulations). AEC Group Disclosure Report compiles with requirements set in the Commission Implementing Regulation (EU) 2021/637 laying down implementing technical standards (ITS) with regard to public disclosures by institutions of the information referred to in Part Eight of CRR and all relevant disclosure related guidelines issued by the regulator.

Beside obtaining new Group member, as described in paragraph above, there are no significant changes in place compared to previous disclosures. Group has not identified any disclosure waivers (no omission of required disclosures takes place).

Group includes in its disclosures all information deemed necessary to provide users with a clear, complete and accurate view of the Group's structure, capital management, risk management system and remuneration policy. Group also identifies information that is material, confidential and proprietary. Group regularly updates Group Policy on Disclosure for compliance with regulatory disclosure requirements.

All disclosures are prepared on a consolidated basis and are presented in **EUR thousand**, unless otherwise mentioned.

Based on EU banking legislation and relevant EBA regulations, AEC Group is assessed as large, non listed institution. In line with that, Disclosure Report as main document is published annually, and Disclosure of key metrics and overview of risk-weighted exposure amounts, in accordance with Article 447 of CRR, is published semi-annually.

Pursuant to Article 434 (1) CRR, the Group publishes the Report annually on the website <https://www.gbkr.si/> and on <https://www.agrieuropa.com.cy/>. Pursuant to Article 434 (2) of CRR, the Group makes available on its website an archive of Disclosure Reports for previous dates.

Senior management attest that disclosures required by regulator are in accordance with Group policies and internal processes, systems and controls. Written attestation is enclosed as Appendix 4 of this Disclosure Report.

1.1. Overview of non-applicable disclosures

Disclosure Report does not contain disclosures not relevant for AEC Group. AEC Group does not operate with credit derivatives, does not use on-balance-sheet netting, IRB approach for calculating the capital requirements for credit risk, internal models for calculating capital requirements for market risk, does not calculate capital requirements for operational risk according to advanced approach and does not perform securitisation transactions.

AEC Group is not a global systemically important institution, so the disclosures of the indicators of the general systemic importance are not relevant (Article 441 of the CRR regulation).

1.2. Disclosures in other published reports

Some of disclosure requirements are already contained in AEC Group Notes to the Consolidated Report and Financial Statements for the year ended December 31, 2023. If that is the case, under respective point of this Disclosure, article of CRR and corresponding AEC Group Notes to the Consolidated Report and Financial Statements paragraph is clearly mentioned.

2. Risk Management Objectives and Policies

(Article 435.1 a,b,c,d,e and f of the CRR Regulation)

Details regarding risk types and risk managements within AEC Group are described in AEC Group Notes to the Consolidated Report and Financial Statements for the year ended December 31, 2023.

The Notes are available at the web site of AEC Group: <https://agriurope.com.cy/>, within section "Annual Reports".

2.1. General information on risk management strategies and policies

The Group defines its risk strategy and risk appetite through the annual strategic planning process, encompassing business strategy and strategic guidelines, to ensure appropriate alignment of risk, capital, liquidity and performance targets.

The Group defines risk management strategy which sets out the Group's objectives in managing risks on a long-term basis and determines the Group's relation to the risks it is exposed to or may be exposed, including the risks arising from the macroeconomic environment in which the Group and each group member is operating.

With Group Strategy on Risk Management, as part of a comprehensive risk management system, the Group:

- defines all risks that the Group is exposed to or may be exposed to in its business,
- defines long-term risk management objectives,
- determines the Group-wide principles of risk management,
- defines the Group risk management governance,
- defines the main principles of the Group risk culture,
- determines the obligation of regular reporting on risk management.

The basic principles of risk taking are:

- Group accepts risks it can manage,
- establishing clear rules for managing individual types of risk, with accompanying procedures for managing each individual type of risk with clearly defined objectives,
- making business decisions based on qualitative and/or quantitative analysis of risk parameters, in order to timely detect changes in the risk profile,
- collecting complete, timely and accurate data important for risk management and providing adequate technical infrastructure for data storage and processing,
- the principle of caution in assuming risk, with continuous monitoring and control of exposure to certain types of risks and respect for the established system of limits,

INTERNAL

- using a number of methods for identifying and measuring risk, and
- using past experiences and lessons learned to avoid future mistakes.

The basic principles of management of risks that the Group is or may be exposed to in its operations are set on the Group level. Group Policy on Risk Management provides guidelines for the risk management process that the subsidiaries apply in accordance with the nature, scope and complexity of their business activities.

Group members define in more details the principles of risk management according to its specifics but following to Group Policy on Risk Management. Each Group member has locally defined risk management policies and procedures that prescribe the responsibilities, method of individual risk management process, the method and methodology for identifying, measuring, evaluating, mitigating and monitoring these risks and the principles of the internal control system.

In order to satisfy the principle of risk taking, following principles of risk management is considered:

- continuous work on identifying, measuring, assessing and controlling risks,
- maintaining such an internal organization or organizational structure through which the front office functions are separated from the activities of the middle office, back office and risk control activities with a clearly defined division of jobs and duties employees preventing conflict of interest,
- familiarizing employees with their jobs and tasks and continuously involving employees at all levels in the risk management process, which means that employees at all levels have basic knowledge and understand the risks from the domain of personal responsibility and act in accordance with the internal regulations,
- adequate communication, information flow and cooperation at all organizational levels, as defined in the Group Strategy on Risk Management,
- the comprehensiveness of the risk management system - risk management should include all business activities and all the risks that the each subsidiary is exposed to in its operations. Establishing a comprehensive framework for risk management as well as a comprehensive and effective internal control system requires a prerequisite for the long-term success,
- developing a risk management system as a strategic commitment - risk management will be continually improved and aligned with the Group's business activities, changes in external and internal regulations,
- active capital management with emphasis on the fulfillment of the obligation that capital must be sufficient to amortize all risks, and
- risk management is part of the business culture - awareness of the importance of risk management is present at all levels of the organizational structure of the Group.

The Group regularly, at least once a year, assesses the risks to which it is exposed to. The risk is the possibility of adverse effects on the capital, liquidity and financial result of the Group as a result of transactions that the Group performs and the macroeconomic environment in which it operates.

The Group establishes a comprehensive and reliable risk management system that is fully integrated into business activities of each Group member and ensures that the Group's risk profile is in line with the Group's risk appetite. Group maintains risk exposure within the prescribed limits, i.e. in accordance with the defined risk tolerance.

AEC Group conducts internal capital adequacy assessment process (ICAAP) and internal liquidity adequacy assessment process (ILAAP) on a continuous basis, in accordance with defined internal acts while respecting the regulatory framework. ICAAP and ILAAP are integrated into the business, strategic decision-making and risk management process of the Group. In course of ICAAP and ILAAP processes, Group identifies all the risk it is or might be exposes to, defines their measurement i.e. risk assessment and monitoring, provides adequate internal capital in accordance with the risk profile of the Group. ICAAP and ILAAP are adequately involved in the Group's risk management process and decision-making process

INTERNAL

and are subject to regular analysis, monitoring and verification by the Group's governing bodies.

Key ICAAP and ILAAP inputs are a business strategy, risk identification, risk appetite, capital, liquidity and financial plans. Business strategy is formed through a formal and rational decision-making process. The key stage of the process is an identification of material risks, including selection of key risk drivers to create a limit system. Limits have been articulated through the establishment of the Risk Appetite, where it is clearly defined to what extent the Group is willing to take risks. Business strategy and risk appetite limits form basis for financial and capital plans which are prepared for the 3-year period. The key part of financial planning is to keep portfolio risks within limits.

ICAAP and ILAAP processes are integral part of risk management framework, and are aligned with the Group's risk appetite which is consistent with the business model and approved by the AEC BoD. The process covers not only current capital and liquidity situation, but it also applies a forward-looking approach.

Based on the Risk Appetite, the Group prepares a business plan and financial forecasts which are crucial for defining internal capital needs (ICAAP process) on the risk-based capital assessment approach and internal liquidity assessment (ILAAP process). Both processes are conducted from the normative and economic perspectives and supplemented by the stress testing program.

Stress testing is one of the most important tools in forward looking risk management. Stress testing is designed to support senior management to uncover possible vulnerabilities when taking a forward-looking view on the Group's risk profile as well as its strategic, business, capital and liquidity planning. Group performs various types of stress testing:

- sensitivity analysis, measuring potential impact of a specific single risk factor affecting capital or liquidity on portfolio, subsidiary or Group-wide level; it is used under ICAAP and for ad-hoc stress testing,
- scenario analysis, assessing the Group's resilience towards a specified macroeconomic scenario; it is used under ICAAP and Recovery Plan, also for capital planning,
- reverse stress testing, as form of scenario analysis where the goal is to identify a scenario or a combination of scenarios that lead to an outcome in which the Group's business model might become unviable. It is used within the Recovery plan, the ICAAP and ILAAP at least annually,
- liquidity stress testing.

Results of stress tests are presented in Risk Reports on both Group and local entity levels and discussed by the relevant management bodies. Mitigating management actions, if deemed necessary, place attention on effectiveness, timeline and feasibility of such actions. The planning process, limit steering process and stressed risk appetite metrics all use stress testing result as an input. Vulnerabilities identified are also considered in the context of business strategy and risk strategy. Capital planning performed within the ICAAP process includes adverse scenario.

List of all risks Group has identified and assessed as material, and their definitions, is presented in the table below:

Table 1_List of risk types assessed as material

Risk type	Risk subcategory	Risk definition
Credit risk	Credit default risk	Possibility of occurrence of adverse effects on the financial result and capital of the Group due to debtor's failure to fulfil its obligations towards the Group
	Counterparty credit risk	Possibility of adverse effects on the financial result and the Group's capital due to default of the other party's obligation in the transaction before the final settlement of the cash flows of the transaction, i.e. the settlement of monetary liabilities under that transaction

INTERNAL

Risk type	Risk subcategory	Risk definition
	FX lending risk	Risk arising from the impact of the change in the domestic currency's exchange rate on financial position and creditworthiness of the borrower due to the currency mismatch between the borrower's receivables and his obligations towards a group member
	Credit risk induced by interest rate risk	Risk of loss due to changes in the reference interest rates to which the repayment of the loan is related, which may adversely affect the client's creditworthiness or client's ability to settle liabilities in a timely manner
	Concentration risk	Risk that directly or indirectly arises from the Group's exposure to the same or similar source of risk
Market risk	FX risk	Risk of losses stemming from adverse exchange rate movements in foreign currencies
	Position risk	Risk of losses, which arise from the price movements of stocks, funds and other types of direct or indirect investments into firms the bank is holding
	Credit Valuation Adjustment (CVA) risk	Risk of loss caused by changes in the credit spread of a counterparty on derivatives transactions due to deterioration of counterparty credit worthiness and changes in its credit quality
Interest rate risk	Interest Rate risk (Banking Book)	Risk of losses arising from adverse movements in the absolute levels of interest rates, the spread between two rates, in the shape of the yield curve or in any other interest rate relationship
	Credit spread risk (Banking Book)	Risk of reduction in value of securities held in banking book due to increase in the levels of market interest rates and required returns
Liquidity risk	Short Term Liquidity risk	Represents the risk that is unable to meet all of its payment obligations in short term (up to 1 year)
	Long Term Liquidity risk	Risk that cannot generate sufficient long-term funding to refinance its business activity
	Liquidity market concentration risk	Liquidity market concentration risk is referred to the various types of concentration of liquidity buffer (issuers, geographical distribution, security types, etc.)
	FI Funding Concentration risk	Funding concentration risk arises from an insufficient level of diversification of liquidity sources in terms of term, product type or creditor
	Customer Funding Concentration risk	Funding concentration risk arises from an insufficient level of diversification of liquidity sources in terms of term, product type or creditor, when it comes to customer deposits
Operational risks	Operational risk in general	Risk of possible negative effects on the financial result and capital of the Group due to omissions (inadvertent and intentional) in the work of employees, inadequate internal procedures and processes, inadequate management of information and other systems in the Group, and the occurrence of unpredictable external events. Includes also risk of adverse effects and losses arising from fraudulent activities performed by external parties, internal parties or combined
	Legal Risk	Risk of adverse effects on the financial result and the Group's capital based on court or off-court procedures related to the Group's operations (obligatory relations, labor relations, etc.).
	Information and communication technology (ICT) risk	Risk of threat to business data, critical systems and business processes. It is the risk associated with the use, ownership, operation, involvement, influence and adoption of IT within an organization. It also comprises cyber risk.
	Information security risk	Risk of loss due to breach of confidentiality, failure of integrity of systems and data, inappropriateness or unavailability of systems and data or inability to change information technology (IT) within a reasonable time and with reasonable. This includes inadequate or failed internal processes or external events including cyber-attacks or inadequate physical security.
	Model risk	Probability of loss resulting from the weaknesses in the financial model used in assessing and managing a risk
	Third-party risk	Risk of possible negative effects on the financial institution in case proper risk management system that covers Outsourcing, ICT and Cyber security is not in place
Other risks	Sovereign risk	Risk of a country defaulting on its commercial debt obligations i.e. risk that a foreign central bank will alter its foreign exchange regulations; risk of a government becoming unwilling or unable to meet its loan obligations.
	Reputational risk	Possibility of adverse effects on the financial result and the Group's capital due to the failure to harmonize the Group's operations with

INTERNAL

Risk type	Risk subcategory	Risk definition
		legal acts, bylaws, internal acts of the Group, as well as with the rules of profession, good business practices and business ethics of the Group and as a consequence possible loss of public confidence, that is, the unfavorable attitude of the public towards the Group's operations, regardless of whether there is a basis for it or not
	Compliance risk	Possibility of adverse effects on the financial result and the Group's capital due to failure to align its operations with law and other regulations, operating standards, procedures for the prevention of money laundering and terrorist financing and other procedures, as well as other acts regulating the operations of Groups, in particular, includes the risk of sanctions of the regulatory body, the risk of financial losses and reputation risk.
	Risk of Money Laundering, Terrorism Financing, or Circumvention of Financial Sanctions	Risk that a contractual party will misuse a business relationship, a transaction for money laundering, terrorism financing activities or circumvention of applicable financial sanctions, the risk of possible negative effects on the financial result, capital or reputation of the Group due to the use of the Group (direct or indirect use of a business relationship with the Group, transaction, service or product of the Group) for money laundering, terrorism financing, and/or circumvention of applicable financial sanctions regimes.
	Strategic and Business risk	Possibility of adverse effects on the financial result and/or the Group's capital due to the lack of appropriate policies and strategies, their inadequate implementation, as well as due to changes in the environment in which the Group operates or lack of adequate Group reactions to these changes
	Climate related and environmental risk	Compromises of two main risk drivers: a) Physical risk refers to the financial impact of a changing climate, including more frequent extreme weather events and gradual changes in climate, as well as of environmental degradation, such as air, water and land pollution, water stress, biodiversity loss and deforestation. Physical risk is therefore categorized as "acute" when it arises from extreme events, such as droughts, floods and storms, and "chronic" when it arises from progressive shifts, such as increasing temperatures, sea-level rises, water stress, biodiversity loss, land use change, habitat destruction and resource scarcity. This can directly result in damage to property or reduced productivity, or indirectly lead to subsequent events, such as the disruption of supply chains. b) Transition risk refers to Group's financial loss that can result, directly or indirectly, from the process of adjustment towards a lower-carbon and more environmentally sustainable economy. This could be triggered, for example, by a relatively abrupt adoption of climate and environmental policies, technological progress or changes in market sentiment and preferences
	Human resource risk	The risk associated with the recruitment and retention of skilled and qualified staff, due to market situation, turnover, sick leave or extreme situations such as epidemics or other natural disasters

Details regarding risk management process in the Group, including identification, measurement and assessment, mitigation, monitoring, control and reporting of risks the Group is or might be exposed to in its operations, are described in the Group Policy on Risk Management. In addition to the umbrella documents from the field risk management on Group level, each credit institution subsidiary also has policies and procedures for managing individual risks types which define in detail the procedures and methodology for assessing risks when approving placements, procedures for risk measurement, the system of limits, risk mitigation techniques determining the required internal capital, the procedures for internal reporting and mechanisms of internal controls for operations. At the third and lowest level, there are also instructions, methodologies for carrying out individual activities or procedures in the process of assuming and managing risks, prescribed forms, and records.

2.2. The Structure and Organisation of the Relevant Risk Management Functions

For the purpose of adequate risk management, at the Group level as well as on each subsidiary an appropriate organizational structure has been established. The organisational structure on the subsidiary level corresponds to the scope, type and complexity of the tasks it

INTERNAL

performs and in order to prevent the conflict of interest, the separation of the functions of taking risks (front office) from the function of risk management (middle office) and activities of support (back office).

Organizational structure of the Group enables realization of established goals and principles of risk management. Overview of AEC Group risk management structure is given in the table below:

Figure 1_AEC Group risk management structure

Supervisory function oversees and monitors Group strategic objectives, organizational structure and risk strategy, including its risk appetite and risk management framework, as well as other policies (e.g. remuneration policy) and the disclosure framework are implemented consistently, oversees and monitors management decision-making and actions and provides effective oversight of the management function, monitors that the risk culture of the Group is implemented consistently, and performs other activities in line with internal rules on governance.

Risk Committee advises and supports Supervisory function of the Board regarding overseeing, monitoring and implementation of the Group's overall Risk Strategy, corresponding Risk Appetite Statement and limits by taking into account all types of risks to ensure they are in line with the business strategy, objectives, corporate culture and values of the Group, and performs other activities in line with internal rules on governance. Risk Committee session is held before the Board of Directors sessions.

Management function is responsible for the implementation of the strategies and discusses regularly the implementation and appropriateness of those strategies and performs other activities in line with internal rules on governance. **CRO** is responsible for setting up comprehensive risk management framework on the Group level, oversees and manages Group Risk Function and coordinates the preparation of Group Risk Strategy and Group Risk appetite statement.

Group Risk function is internal control function. It has direct access to Supervisory function and the Risk Committee and to all business lines and other internal units that have the potential to generate risk, as well as to subsidiaries. The structure and organization of Group Risk function is set to ensure implementation of risk strategy, effective risk management processes in place, as well as identification and adequate assessment of risks they pose to the Group.

Group Risk Steering Committee (GRISCO) mission is to monitor the risk exposure of each Subsidiary and on the Group level and if necessary, proposing to the Group Management Function certain measures for the improvement of risk management. GRISCO meetings are held at least on monthly level.

Group Watchlist Steering Committee monitors the risk exposure of clients on Watchlist (- non-credit decision), more specifically activities of approving the classification and re-classification of watch listed and other selected clients, approving mitigating action plans for watch listed and other selected clients, and reviewing the effectiveness of the implemented mitigating action plans.

For the purpose of identifying and more specifically managing and mitigating risks to which the Group is exposed, each subsidiary has organized its functions following the "3 lines of defence" rules:

First line of defence is on the level of business units as risk taking units. Their roles are compliance with risk appetite limits, implementation of risk governance principles and risk management procedures and considering risk mitigation vs profitability when decision making.

Second line of defence is on the level of Risk Management function and Compliance function. Their responsibilities are development of processes, risk models and tools, setting and allocation of limits, proposing strategies, providing internal policies, methodologies and procedures, setting internal validation framework, assessment of the use of the models and their correct application in practice, reliability of input data (risk management function), reviewing and monitoring regulatory changes with which the Group is required to comply and offering support to follow regulatory requirements properly (compliance function).

The third line of defence is on the level of Internal audit function. It is responsible for monitoring the effectiveness of the Group's internal quality control and risk management systems, reliability of reporting process and general risk assessment of all aspects.

2.3. The Scope and Nature of Risk Reporting

Risk reporting process in AEC Group includes two segments:

- Internal reporting,
- Regulatory reporting.

Internal reporting provides a comprehensive view of the Group risk position, compliance with Group risk appetite, warning signals in case of increase in exposure to certain risks beyond the Group risk tolerance. Reports include forward-looking component and present development of the risk exposure in order to ensure prompt reaction and setting up the mitigation measures to prevent potential breach. Internal risk reporting includes a set of reports to which the sectors in charge of risk management and control are submitted to the relevant bodies on the subsidiary level and to Group Risk Committee and Group Management body in its Management function (monthly) and in its Supervisory function (quarterly) in accordance with the deadlines defined by the Group Risk Management Policy. Reporting could be arranged more often if necessary and as defined by relevant policies and frameworks.

Regulatory reporting implies submission of regulatory prescribed reports to the regulator. The reports on risk management and control are submitted on consolidated level in the forms and within the deadlines prescribed by the regulator. The Group functions are responsible for reviewing consolidated reports before submission to the regulator. In addition, each subsidiary member is responsible for regulatory reporting based on local regulation.

2.4. The Policies for Hedging and Mitigating Risk, and the Strategies and Processes for Monitoring the Continuing Effectiveness of Hedges and Mitigants

INTERNAL

AEC Group uses various types of risk mitigation techniques. Details are described under subtitles for each specific risk type in this Disclosure Report. AEC Group does not apply any form of hedge accounting according to IFRS accounting standards.

2.5. A Declaration Approved by the Management Body on the Adequacy of Risk Management Arrangements of the Bank

AEC BoD declares that risk management process on the Group level is adequate and that implemented risk management is adequate with regard to Group business strategy and model, complexity and risk profile of the Group framework.

AEC BoD for the purpose of Article 435 (e) CRR declares that Group risk management arrangements are adequate with regard to Group risk profile and strategy.

2.6. Risk statement approved by the management body succinctly describing the relevant Group's overall risk profile associated with the business strategy

AEC BoD approves, for the purpose of point 435.1 of CRR, Statement succinctly describing Group's overall risk profile associated with the business strategy.

Risk appetite statement represents the articulation of the Group attitude towards risk taking in order to achieve strategic goals defined in Risk and Business Strategy. It is quantified through set of indicators and limits based on risk types or subtypes. The values of key risk indicators that are used to monitor Group risk profile, are set as either hard limits or targets, and are produced from the current and expected risks of the Group as well as from best practices and the general known criteria of the business, taking into consideration the regulatory requirements.

Overview of Group risk profile and key indicators i.e. indicators that has set limits as strict requirements for taking risks in a certain category or type of risk, as of 31.12.2023 is presented in the table below. Group Risk Appetite Statement is discussed and reported to Risk Committee and AEC BoD.

Table 2_Risk Appetite Statements indicators as of 31.12.2023

Risk Area	Key Risk Indicator	31.12.2023
Capital metrics	Common Equity Tier 1 ratio (CET1)	17.36%
	Tier 1 ratio (T1)	17.36%
	Total Capital ratio (TCR)	18.46%
	Risk bearing capacity (RBC) utilization	65.9%
	Leverage ratio	11.06%
Credit risk	NPL ratio	2.81%
Concentration risk	Single Name Concentration ratio	21.52%
Market Risk	FX Risk indicator	3.90%
	Sum of all exposures in Trading book	12.50
Sovereign risk	Exposure towards Government bonds issued by RS/SI	61.34%
Liquidity Risk	Liquidity Coverage ratio (LCR)	385.69%
	Loan-to-deposit ratio (LTD gross)	76.93%
	Survival Horizon (days)	147

Additional risk indicators and figures are included in template EU KM1 – Key metrics template presented in point 6.2 in this Group Disclosure Report, and also under the various risk type specific paragraph.

3. Governance Arrangement

(Article 435.2 a, b, c, d and e of the CRR Regulation)

In October 2023, AEC BoD adopted a new enhanced Group Policy on Internal Governance. The key purpose of the Group Policy on internal governance is to ensure effective and prudent governance of the Holding Company and the Group within applicable laws and regulations, bylaws, standards and corporate governance best practice recommendations.

Each subsidiary has adopted on the local level its own internal governance policy which is aligned to the maximum extent permitted under applicable local law, with the principles and rules set out in Group Policy on Internal Governance.

On 31.12.2023, AEC BoD has 9 members, out of which 2 are executive BoD members in the capacity of management function and 7 are non-executive BoD members in the capacity of supervisory function. During 2023, AEC BoD was joined by one additional Board member approved by the ECB (Ms. Aleksandra Babić, CRO). At the same time, the previous executive member of the BoD, Mr. George Syrichas became a non-executive member of BoD.

In this manner and as a result of additional member in the AEC BoD, the Holding company improved collective suitability of the BoD and has strengthened the composition of BoD committees in 2023.

Committees of the Board of Directors in its supervisory function

In accordance with Article 109(1) Directive 2013/36/EU and in conjunction with Articles 76(3), 88(2), and 95(1) of Directive 2013/36/EU, and the Group Policy on Internal Governance, a Risk Committee, an Audit Committee, a Nomination Committee and an Remuneration Committee are established in AEC to advise the Board of Directors in its supervisory function and prepare the decisions to be taken by that Board of Directors. All Committees of the Board of Directors in its supervisory function have adequate access to all relevant information from relevant corporate and control functions, in order to perform their role. Committees support the Board of Directors in its supervisory function (non-executive directors) in specific areas and facilitate the development and implementation of a sound internal governance framework. All committees are chaired by a non-executive member of the BoD who is able to exercise objective judgement. Committees are composed of three members, while making sure that different committees are set up by different combinations of members. Independent members of the Board of Directors in its supervisory function are actively involved in the committees. Chairs and members of the committees occasionally rotate between the committees, taking into account the specific experience, knowledge and skills that are individually or collectively required for those committees.

The Risk Committee is composed of non-executive members of the Board of Directors. Members of the Risk Committee have appropriate knowledge, skills and expertise to fully understand and monitor the risk strategy and the risk appetite of the Group. Members of the Risk Committee have, individually and collectively, appropriate knowledge, skills and expertise concerning risk management and control practices.

The Audit Committee is composed of non-executive members of the Board of Directors. The Audit Committee members as a whole have competence relevant to the financial sector. The chair of the Audit Committee is an independent member of the Board of Directors in its supervisory function (non-executive director).

The Remuneration Committee is composed of non-executive members of the Board of Directors. Members of the Remuneration Committee have collectively appropriate knowledge, expertise and professional experience concerning remuneration policies and practices, risk management and control activities, namely with regard to the mechanism for aligning the remuneration structure to Group's risk and capital profiles.

The Nomination Committee is composed of non-executive members of the Board of Directors. Members of the Nomination Committee have, individually and collectively, appropriate

INTERNAL

knowledge, skills and expertise relating to the Group's business and concerning the selection process and suitability requirements as set out under Directive 2013/36/EU, to be able to assess the appropriate composition of the Board of Directors, including recommending candidates to fill Board of Directors vacancies.

3.1. Directorships held by members of management body

AEC Board of directors in its management function comprises the following two (2) executive members as of 31st December 2023: Ms Jelena Galić as CEO and Ms Aleksandra Babić as CRO.

3.2. Recruitment policy for the selection of members of the management body

This section presents information regarding the recruitment policy for the selection of members of the management body and their actual knowledge, skills and expertise.

On the Group level, the main principles on selection of members of the management body is defined in Group Policy on the assessment of the suitability of members of the management bodies and key function holders (hereafter: Group Suitability Policy). In accordance with the Group Suitability Policy members of the management body must have professional (theoretical) knowledge, skills and (practical) experience, including personal integrity, to independently exercise their judgement in taking decisions in the best interest of the AEC Group. Members must be competent to exercise a comprehensive and objective judgement on the relevant matters at all times.

The Suitability Policy is in line with the strategy, values and long-term vision of the Group. It sets out detailed selection strategy and procedures for the assessment of the suitability of members of the management body and Key Function Holders of the Group. It includes criteria for the assessment of the collective and individual suitability, while respecting the principles of diversity, proportionality and equal opportunities. The Suitability Policy also outlines the documentation required for the assessment, procedures to ensure the suitability, and procedures for the reassessment of the suitability if required.

Members of the management body must hold at least a university degree and possess professional theoretical knowledge, skills and practical experience in banking and financial services or other relevant areas (e.g. economics, law, administration and financial regulations, mathematics, statistics) and at least 5 years of recent experience in the areas related to banking or financial services.

When selecting members of the management body, the Group considers the professional standards (knowledge, experience) and ethical standards (reputation, collective suitability, conflict of interests, sufficient time commitment), as well as other professional standards (the obligation of diligent, loyal and independent behavior) of the management body's members.

Members of the AEC BoD have enough experience for the purpose of ensuring constructive and critical reviews of the Management function decisions and an efficient supervision over the Management function, of effectively exercising their role in accepting policies and decisions, the responsibility of which falls on AEC BoD in its Supervisory function, especially regarding the supervision of implementing strategic goals of the Group, of determining, accepting and regularly inspecting the strategy of assuming and managing risks, as well as effectively participating in BoD's Committees.

In line with above mentioned Policy, as well as a Fit & Proper procedure imposed by the regulator, all candidates for the BoD membership are assessed in terms of their individual suitability, as well as collectively, in terms of collective suitability of the BoD as a whole.

All subsidiaries are required to follow the professional standards and ethical standards as defined by the Policy, as well as other professional standards (the obligation of diligent, loyal and independent behavior) of the management body's members.

Presentation of the AEC BoD in its management function (executive directors):

Ms Jelena Galic (CEO) graduated from the faculty of Economics at University of Belgrade and obtained PhD in Economics at the same University. Jelena Galic joined AIK bank in March 2015 as Chairperson of the Board of Directors. Before this position she was the Director of the Business Advisory Services Deloitte Belgrade and also Practice Leader in Financial Service Industry and Public Sector for the cluster composing of Serbia, Republic of Srpska, Macedonia and Montenegro with S&O and ICT. Her service line focus was on strategy development, business restructuring and change management. Before joining Deloitte, she was the Executive Director of Economics Institute in Belgrade. During her 25 years of professional experience Ms. Galić has taken a leading role in a number of projects performed for public and private sector clients in the area of strategy and business development. In addition to this, during her engagement with Economics Institute she has also been active in providing advisory services to the government in the area of economic policy and financial sector development (she led number of projects governed by International Development agencies such as ED, WB, IFC and performed for the government as a beneficiary). She attended many domestic and international conferences as invited speaker and published more than 40 working papers and was one of the founders and Vice President of the Serbian Association of Managers.

Ms Aleksandra Babić (CRO) graduated from Webster university, Vienna where she also received her master's degree. Ms. Babić has more than 15 years of experience in the financial sector. She started her career as an auditor of financial institutions in Ernst&Young. Later she joined Ernst&Young advisory team. She was engaged on the projects in risk management area including introduction and implementation of Basel standards. In 2014, she joined AIK bank, Belgrade as Head of risk controlling. In 2021, she became Head of AEC group risk management function and responsible for development of comprehensive risk management framework on the Group level and for monitoring of the implementation of the Group Risk Management and Group Risk Appetite on the subsidiary level. Both as Head of Risk controlling and Head of Group risk function Ms Babić was actively involved in numerous M&A processes. Since June 2023, she is a Group Chief Risk Officer.

Presentation of the AEC BoD in its supervisory function (non-executive directors):

Mr Romeo Collina (Chairman of the Board of Directors) started his banking career in Italy in 1980s, before moving thereafter the US for 10 years between Chicago and New York where he took over as Deputy Chief Branch Manager responsible for Corporate clients in US and Central&South America. In 2000, Mr. Collina moved to London as a Branch Manager until 2004 when he became the Head of Trade Financing, Corresponding banking and International Network, in more than 20 countries for Capitalia, the third largest Italian banking Group. After the merger with UniCredit he was involved in the most significant turnaround projects. In 2010 he was appointed as CEO in ATF Bank, the third largest Kazak Group. In 2013 he was Head of Restructuring and Workout in Italy, becoming the following year Deputy Chief Risk Officer. In 2015, Mr. Colina was nominated Deputy Chairman of the Management Board and GM in Zagrebačka, number one Bank in Croatia. From March 2016 to the end of 2018 he joined the Board of Bank Austria, as Deputy Chairman of the Management Board and COO. In 2019, he was part of the team who was working along with the Group CEO on the new 2020-2023 Business Plan. On January 2020, he was appointed as CEO again in Zagrebačka until he retired on September 2021.

Mr Aleksandar Kostić (Vice-Chairman of the Board of Directors) has more than six years of professional experience in financial management. In the past years he has been involved in the realization of banking division strategy with special focus in new investment and M&A processes. Before joining the Group, he has gained knowledge and experience in Private Equity, Credit and Real Assets through different assignments and investment projects within the region. Alexander graduated from the royal hall University of London where he studied at the Department of Economics.

Mr. Nicolas Anastasis Neophytou is an ACCA and has been in the accounting profession for more than 40 years. He worked in London for 12 years gaining experience in the fields of audit and corporate taxation. He joined PricewaterhouseCoopers (Cyprus) in 1989 and became a

INTERNAL

partner in 1994 specializing in International Tax in diverse industry sectors, with special focus in financial service industry. From 2005 to retirement in 2013, he was heading the Global Corporate Services Department in Limassol, being in charge of large and diverse portfolio of clients ranging from multinational and local companies to high-net-worth individuals.

Mr Martin Elling is a Dutch national, graduated in economics in 1979 after which he joined United Nations where he worked for 11 years on sector policy lending in Asia, Eastern Europe and Africa mostly for the World Bank. In 1992, he joined the European Bank for reconstruction and development (EBRD) in London as a senior banker. He left the bank in 1997 and he has since then created several businesses in B2B services in Ukraine and Russia. After achieving 3 successful exits Martin Now works mostly as a non-executive director concentrating on strategic development and corporate governance.

Mr Richard Sharko is an American CPA (retired) and has been in the accounting profession for more than 40 years. He originally started with PricewaterhouseCoopers (PwC) in Los Angeles in 1983. Subsequently he worked in London, Budapest, Vladivostok, Moscow and Amsterdam offices in the PwC network. During that time, he gained experience in the areas of audit and accounting in the banking, insurance, investment, real estate and extractive industry sectors became a partner in the 1996 and retired from PwC in 2021. In addition to the auditing and accounting experience, Mr. Sharko was also a member of the Network Global Governance Board from 2009 to 2013 and the CRO for the PwC CEE region from 2013 till 2015. From 2015 -2020, he was a Board member of the International Auditing and Assurance Board.

Mr Lambros Papadopoulos has 29 years of experience in senior management and board positions in listed companies in the United States, the United Kingdom, Greece and Cyprus. Since January 2022 he is an Independent Member of Board of the Board of Directors of Agri Europe Cyprus Ltd and is currently the Chairman of the Risk Committee. Mr. Papadopoulos commenced his career in 1993 at Ernst&Young in London, where he qualified as a member of ICAEW and worked in the divisions of Audit and Corporate Finance until 1998. During 1989 till 2012 he worked at Citigroup London as the head of equities research for Greece and head of research for small and medium capitalization companies in continental Europe since 2006 he held the position of managing director and was a member of the operating committee in equity research. Amongst the other non-executive position that Mr. Papadopoulos held was being the Chairman of the Audit Committee and independent BoD member at Bank of Cyprus in 2013 and Hellenic bank between 2015 and 2018. Between 2018 - 2022 he was an independent BoD member and member of the Audit/ Strategy committees of the Board of Directors of Global Post Investments, which is listed on the London Stock Exchange Mr. Papadopoulos holds a B.A. (Hons) Accounting with Computing degree from the University of Kent at Canterbury (UK).

Mr George Syrighas has more than 30 years of experience in the financial sector. He served as an Executive Director and Board Member of the central Bank of Cyprus and the Resolution authority of Cyprus. He also follows and deeply understands international economic and financial developments and challenges. He has participated in numerous international for a, such as the European Commission, the International Monetary Fund, the European Central Bank and the ECB Governing Council as the Governor's accompanying expert. Mr. Syrighas holds the PhD in Economics from the University of Essex. He has taught economics and business executive courses at various Universities and Institutions in Cyprus and abroad. He frequently discusses current economic affairs in public media and has given numerous lectures in Cyprus and abroad on topics related to the Cyprus and European economies, banking, financial stability, monetary policy and exchange rate policy and European Union issues.

3.3. Policy on diversity with regard to the selection of members of the management body, the objectives and targets set out in that policy, and the extent to which they have been achieved

The Group as whole is committed to improving the gender ratio within the management body, while also taking into account the legal requirement that the members of the

INTERNAL

management body must have adequate knowledge, skills and experience. The fulfilment of the latter requirements remains the top priority during the selection of suitable individuals. All management body appointments must primarily be based on merit, considering skills, ethics, and experience, without regard to color, race, nationality/ethnicity, disability, age, gender, religion, sexual orientation, political opinion, or any other unfair criteria. Organizations within the Group should not recruit members of the management body with the sole purpose of increasing diversity to the detriment of the functioning and suitability of the management body collectively, or at the expense of the suitability of individual members of the management body. The Group strives for a union of equality, where all genders can pursue their chosen path in life in a society free from violence and stereotypes, where leadership is shared equally and where individuals thrive in a gender-equal economy.

The Group is pursuing the principle of a balanced gender representation in a sense that in the management bodies of the Group, underrepresented gender collectively represents at least 20% of the members of the management bodies within the Group by end of 2026.

As of 31.12.2023 the Group's management bodies were represented by both genders with 28 % of underrepresented gender.

Regarding the other aspects of diversity, the Group is well balanced in its main structures, meaning that there are diversity in formal education, skills, work experience, age, nationality, etc.

3.4. Information on separate risk committee and the frequency of the meetings

The AEC Group has established a governance structure with the separate Risk Committee, which is a consultative body of the Board of Directors in its supervisory function and whose mission consists of supervising the senior management with regard to the implementation of the risk management strategy at the Group level. It also provides advice with regard to the Group current and future risk appetite as presented in the chapter 2.2 of this Report. In 2023, the Risk Committee has met 10 times.

3.5. Information Flow on Risk to the Management Body

Effective steering requires involvement of different Group functions and Group bodies. Transparent communication of the current risk profile and exposure is provided through the regular risk reporting.

Internal reports provide the comprehensive view of the Group risk position, compliance with Group risk appetite, warning signals in case of increase in exposure to certain risks beyond the Group risk tolerance. Reports include also forward-looking component and present development of the risk exposure in order to ensure prompt reaction and setting up the mitigation measures to prevent potential breach.

Internal risk reporting includes a set of reports to which the sectors in charge of management and risk control are submitted to the relevant bodies on the subsidiary level and to Group Risk Committee and Group Management body in its Management function and in its Supervisory function in accordance with the deadlines defined by the Group Risk Management Policy.

As a general principle, reporting to the AEC BoD in its Management Function is done on a monthly basis and to the AEC BoD in its Supervisory Function on a quarterly basis or more often if necessary and as defined by relevant policies and frameworks.

4. Scope of Application

(Article 436 a, b, c, d, f, g of the CRR Regulation)

Agri Europe Cyprus Limited (hereinafter "AEC") is a legal entity incorporated and domiciled in Cyprus and is ultimate financial holding of banking Group. Its parent and ultimate holding company is Agri Holding AG, Switzerland. Its ultimate controlling party is Mr. Miodrag Kostić.

INTERNAL

The Parent Company's registered office is at Street Krinou 3, The Oval, Flat 502, 4103 Agios Athanasios, Limassol, Cyprus.

Prudential consolidation is done on AEC level as the AEC is subject to the CRR. In accordance with Articles 11 and 18 CRR, a prudential consolidation includes AEC as the parent company, and all other institutions, financial institutions and ancillary services undertakings that are its subsidiaries within the meaning of Article 4 (1) (16) CRR, or are jointly managed together with other parties within the meaning of Article 18 (4) CRR. Subsidiaries are fully consolidated.

AEC Group does not qualify as a financial conglomerate and is not subject to the respective supplementary supervisions.

AEC Group is obliged to publish disclosures on consolidated level, as required by the Regulation (EU) No 575/2013 of the European Parliament and of the Council. Group members are listed in the Introduction part of this Disclosure Report.

The Group's ownership structure with percentage of ownership is shown in the figure below. AEC owes 91.7% of Gorenjska bank, while others have 100% ownership shares in subordinate entity.

Figure 2_AEC Group ownership structure

4.1. Differences in the scopes of consolidation

The principles of prudential consolidation are not identical to those applied for Group financial statements. Nonetheless, the majority of subsidiaries included in the prudential consolidation are also fully consolidated in accordance with IFRS in the Group's consolidated financial statements.

The main differences between prudential and accounting consolidation as of December 31, 2023 are:

- Subsidiary outside the banking and financial sector is not consolidated within the regulatory group of institutions but is included in the consolidated financial statements according to IFRS (subsidiary Imobilia - GBK, d.o.o., Kranj), and
- Subsidiaries which, according to CRR Article 19, can be excluded due to immateriality (Filira, poslovne storitve d.o.o., Ljubljana).

INTERNAL

As of year end 2023, prudential consolidation includes six entities, excluding the parent Agri Europe Cyprus Limited, where all entities were consolidated with full consolidation approach. The classification applied for these entities is in accordance with CRR. The regulatory group comprised: 3 credit institutions, 2 holding companies, 1 Broker company and 1 Leasing company.

Table EU LI3 below illustrates the differences in the accounting and prudential scope of consolidation. It considers all entities for which the method of the accounting consolidation is different from the method of the prudential consolidation. On an entity-by-entity level the table presents the method of accounting consolidation and then in the following columns whether and how – under the prudential scope of consolidation – the entity is recognized. This is then finally supplemented by a short description of the entity.

Table 5_EU LI3 – Outline of the differences in the scopes of consolidation (entity by entity)

a	b	c	d	e	f	g	h
Name of the entity	Method of accounting consolidation	Method of prudential consolidation					Description of the entity
		Full consolidation	Proportional consolidation	Equity method	Neither consolidated nor deducted	Deducted	
Agri Europe Cyprus LTD, Cyprus	Full consolidation	X					Holding company
NordAgri NV, Netherlands	Full consolidation	X					Holding company
M&V Investmens a.d, Beograd	Full consolidation	X					Broker company
AIK Banka a.d, Beograd	Full consolidation	X					Credit institution
Eurobank direktna, a.d, Beograd	Full consolidation	X					Credit institution
Gorenjska banka d.d, Kranj	Full consolidation	X					Credit institution
GB Leasing d.o.o, Ljubljana	Full consolidation	X					Leasing company
Imobilija - GBK, d.o.o, Kranj	Full consolidation				X		Real estate activities
Filira, poslovne storitve d.o.o, Ljubljana	Full consolidation				X		Consulting company

4.2. Reconciliation of regulatory own funds to the IFRS balance sheet

The table EU LI1 below provides a comparison between the consolidated balance sheet for accounting and prudential purposes as of December 31, 2023.

The regulatory balance sheet is split further into the parts subject to credit risk, counterparty credit risk, securitization positions in the regulatory banking book, market risk as well as the part which is not subject to capital requirements or relevant for deduction from capital. The market risk framework in column (f) includes our trading book exposure, our banking book exposure which is booked in a currency different from Euro as well as securitization positions in the regulatory trading book. Specific assets and liabilities may be subject to more than one regulatory risk framework. Therefore the sum of values in column (c) to (g) may not equal to the amounts in column (b). Moreover the allocation of positions to the regulatory trading or banking book, as well as the product definition, impacts the allocation to and treatment within a regulatory framework and might be different to the product definition or trading classification under IFRS.

Differences between carrying values on the regulatory balance sheet in column (b) and amounts deducted from CRR/CRD capital are explained further below within the table "EU CC1 Composition of regulatory own funds" as referenced in the last column of this table.

*References provide the mapping of regulatory balance sheet items used to calculate regulatory capital as reflected in the column "References" in "EU CC1– Composition of regulatory own funds". Where applicable, more detailed information are provided.

INTERNAL

The main difference between data which are shown in columns (a) and (b) within Template EU LI1 is the scope of consolidation ie number of entities within scope. There is no other differences.

Total difference is 10,376 EUR for asset and 6,465 EUR for liabilities. The main differences are on following categories:

- Loans and receivables due from customers,
- Investments in associates and joint ventures,
- Investment property,
- Deposits and other liabilities due to customers.

Detail breakdown and composition of each amount presented under separate line items reported in published financial statements, presented in the table above, is included in Notes to audited consolidated financial statements of AEC (Note 20 to 36).

Table EU LI2 as of December 31, 2023 presents a description of the differences between the financial statements' carrying value amounts under the regulatory scope of consolidation and the exposure amounts used for regulatory purposes.

Table 7_EU LI2 – Main sources of differences between regulatory exposure amounts and carrying values in financial statements

11	Other differences	-				
12	Exposure amounts considered for regulatory purposes	9,112,393	8,469,046	-	463,530	639,943

4.3. Impediments to fund transferst

The Group entities within the scope of prudential consolidation are subject to local regulatory and tax requirements as well as potentially exchange controls. During 2023 the Group did not have external capital distributions.

There are no material practical or legal impediment to the prompt transfer of own funds or repayment of liabilities among the Parent company and its subsidiaries. Also, in the foreseen future we do not see any material practical or legal impediment to the prompt transfer of own funds or repayment of liabilities among the Parent and its subsidiaries.

4.4. Potential capital shortfalls in unconsolidated subsidiaries

Group subsidiaries which were not included in prudential consolidation due to their immateriality did not have to comply with own regulatory minimum capital standards in 2023.

There are no circumstances under which use is made of derogation referred to in Article 7 CRR or individual consolidation method laid down in Article 9 CRR.

5. Own Funds

(Article 437 a , b,c,d and e, 468 of the CRR Regulation)

5.1. Own Funds composition, prudential filters and deduction items

Group`s capital is comprised of elements of the total capital, additionally reduced by deductibles.

Among instruments of common equity capital, the Group includes common shares that meet the terms and conditions from Article 28 of the CRR regulation. Among the important terms and conditions of instruments of common equity capital are constancy, flexibility regarding payments and availability for covering loss.

The Group does not have capital instruments of additional Tier 1 capital and Tier 2 capital.

In line with regulatory requirements, the Group must meet the Common Equity Tier 1 capital ratio of 4.5%, Tier 1 capital ratio of 6% and the total capital ratio of 8%. At the end of 2023, Common Equity Tier 1 capital exceeded the requirements for 761,089 thousand EUR, Tier 1 capital for 672,347 thousand EUR and total Own Funds for 618,766 thousand EUR.

The table below shows the composition of regulatory own funds with reference and additional explanations below the table regarding the source from balance sheet under regulatory scope of consolidation.

Table 8_EU CC1 - Composition of regulatory own funds

000 EUR

		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
Common Equity Tier 1 (CET1) capital: instruments and reserves			
1	Capital instruments and the related share premium accounts	40,001	E
	of which: Instrument type 1	40,001	
	of which: Instrument type 2	-	
	of which: Instrument type 3	-	
2	Retained earnings	821,305	G, H

From total retained earnings as per regulatory consolidation in the amount of 935,053 thousand EUR (table EU CC2) in the calculation of regulatory Own funds in table EU CC1 is included 821,305 thousand

INTERNAL

EUR. The difference represent the rest of consolidated retained earnings for which the exact future usage is not still determined.

Additional value adjustments as of December 31, 2023 in the amount of 575 thousand EUR relate to 0.1% of:

- Receivables under derivatives net amounting to 5,469 thousand EUR, and
- Following types of Securities:
 - equity instruments held for trading amounting to 8,189 thousand EUR,
 - equity instruments non-trading mandatorily at FVtPL amounting to 17,400 thousand EUR,
 - equity instruments FVtOCI amounting to 13,928 thousand EUR,
 - debt instrumets FVtOCI amounting to 518,604 thousand EUR,
- Other assets at Fair value amounting to 11,055 thousand EUR.

The difference to total amount presented under the table EU CC2 relate to debt instruments at amortized cost amounting to 302,718 EUR and for one part of equity instruments FVtOCI which are for FS consolidation presented under other assets.

Deferred tax assets that rely on future profitability excluding those arising from temporary differences in the amount of 2,078 thousand EUR fully relate to deferred tax assets on tax loss carryforwards, as presented in Note 29, of Audited consolidated financial statements.

"Other regulatory adjustments" amounts -3,618 thousand EUR as of December 31, 2023 according to Article 1 (1) second subparagraph of the Commission Delegated Regulation (EU) No 183/2014 represents a reduction of CET1 related to general and specific credit risk adjustments (impairments for assets and provisions for off-balance sheet items) included in year-end profits.

Based on (EU) No183/2014 which defines that the amounts required to be included in the calculation of general and specific credit risk adjustments by an institution shall be equal to all amounts by which an institution's Common Equity Tier 1 capital has been reduced in order to reflect losses exclusively related to credit risk according to the applicable accounting framework and recognised as such in the profit or loss account are included in the calculation of general and specific credit risk adjustments.

5.2. Reconciliation of regulatory own funds to the balance sheet according to IFRS

The table below highlights the difference in the basis of consolidation for accounting and prudential purposes as it compares the carrying values as reported under IFRS with the carrying values under the scope of the prudential consolidation. References in the last column of the table provide the mapping of regulatory balance sheet items used to calculate regulatory capital. The reference-columns presented below reconcile to the references-columns as presented in the template "EU CC1-Composition of regulatory own funds".

Table 9_EU CC2 – Reconciliation of regulatory own funds to balance sheet in the audited financial statements

6. Own funds requirements and risk-weighted exposure amounts

(Article 438 a, b, d of CRR regulation, Article 447 of CRR regulation)

6.1. Summary of the Approach to Assessing the Adequacy of Internal Capital to Support Current and Future Activities

The Group has established an internal capital adequacy assessment process (ICAAP) in accordance with its Strategy on Risk Management, i.e. in accordance with its risk profile. The Group conducts ICAAP on continuous basis, while respecting the regulatory framework.

Within Pillar 1, the Group calculates its capital requirements for the credit (including counterparty credit risk), market risks, operational risk and credit valuation adjustment (CVA) risk. Group uses the standardised approach for Credit and CVA risk and Basic indicator approach for calculation of capital

INTERNAL

requirements for operational risk, as defined within CRR. Within Pillar 1, the Group calculates minimum capital requirements for FX risk and position risk in trading book positions in equities.

Additional risk types are defined within Pillar 2. Under Pillar 2, the Group calculates internal capital requirements for risks assessed as material, using internal models in great extent as well as forward looking risk parameters within models.

are used. List of all material risk is defined under point 2.1 of this Report.

Under ICAAP, Group also defines Internal capital by applying internal approach. Internal capital represents amount of capital that is available for coverage of risks the Group is or might be exposed to. When defining it, Group takes into consideration relevant regulatory regulations in this area, as well as standards on the Group level regarding ICAAP and capital.

The Group determines available internal capital and distribute it among identified risk types. Total internal capital requirements indicate the amount of capital needed to cover all risks the Group is or might be expose to in its operations, while the internal capital requirement for an individual risk indicates the amount of capital required to cover the individual risk to which the Group is or might be exposed to.

The Group implements internal capital adequacy assessment process in accordance with:

- Group Strategy on Risk Management and Group Policy on Risk Management,
- Group Framework on ICAAP and ILAAP,
- Additionally, all Group members define in their internal acts internal capital adequacy assessment process, all in accordance with the framework defined at the Group level.

By planning available internal capital, the Group also ensures the maintenance of the level of capital that can support further growth of placements, employ future sources of funds and ensure continuity in the implementation of business policy. Planning of regulatory and internal capital is carried out for a period of three years.

ICAAP is a formalized and documented processes that meets the following criteria:

- is based on the process of identification and measurement i.e. risk assessment,
- provides a comprehensive risk assessment and measurement, as well as monitoring of significant risks that the Group is exposed to or may be exposed to in its business,
- provides adequate level of available internal capital in accordance with risk profile of the Group,
- it is adequately involved in the Gr'up's management system and decision-making in the Group, and
- is subject to regular analysis, monitoring and verification by the Gr'up's governing bodies.

ICAAP process is performed on consolidated level and includes the following stages:

- identification of risk types and their risk materiality assessment,
- quantification and aggregation of risks, and allocation of capital for each risk assessed as material,
- stress testing,
- risk bearing capacity utilization calculation,
- monitoring and reporting.

The Group defines in the Group Framework on ICAAP and ILAAP quantitative and qualitative criteria based on which material risks are determined, that are further included in the internal capital adequacy assessment process. This takes into account the type, scope and complexity of the Group's operations, as well as the specificities of the markets in which the Group and its members operate.

The Group uses following approaches and models for calculation of internal capital requirements for each of the materially significant risks identified:

- Credit default risk incl. Counterparty risk - approximation of IRB approach,
- FX lending risk - Internal model,
- Credit risk induced by interest rate risk – Internal model,
- Concentration risk - Internal model based on the Herfindahl-Hirschman Index (HHI),

INTERNAL

- Market risks - Standardized approach,
- CVA risk – Standardized approach,
- Interest rate risks – Internal model,
- Liquidity risk – regulatory based approaches and internal models,
- Operational risk - Basic indicator approach and internal model,
- Other risks – internal approach.

Group tends to conduct stress testing for all material risks, and also performs stress testing of Internal capital

Total internal capital requirements are calculated as a simple sum of internal capital requirements for each of the risk type for which capital requirements is calculated, plus the effects of stress tests performed for certain risks. This approach is considered conservative because it does not take into account the effects of diversification between different types of risks.

AEC Group constantly monitors RBC utilization throughout the year and reports it to the AEC BoD at least on quarterly level. Annually ICAAP Report is created and Capital Adequacy Statement with BOD approval is submitted to the Regulator.

Economic capital utilization by total internal capital requirements, including stress test effects, as of 31.12.2023 amounts 65.9%, and excess capital is 355.4 mEUR.

On November 22nd, 2023, Gorenjska Bank successfully concluded the issue of bonds in the total nominal amount of EUR 72.6 million, aimed at fulfilling the Minimum Requirement for Own Funds and Eligible Liabilities (MREL) requirement. The bonds were offered to Slovenian and international investors (banks, insurance companies, fund managers and other financial institutions), Gorenjska banka thereby re-established itself on the capital markets. One of buyers was M&V, related party within AEC Banking Group, holding GB issued debt security in amount of 1 mEUR. The bond will mature in 4 years, with an option for early redemption after three years. The principal interest rate is set at 9.25% per annum.

In the template EU KM1 the Group shows following items as of 31.12.2023, and as of previous disclosure periods, 30.6.2023 and 31.12.2022:

- own funds structure,
- risk exposure amounts,
- capital buffers,
- important ratios related to capital,
- leverage ratio,
- liquidity coverage ratio and
- net stable funding ratio.

6.2. Risk-weighted exposure amounts and minimum capital requirement

AEC Group calculates risk weighted exposure amount for Pillar 1 risks, i.e., credit risk (including counterparty credit risk), market risks (FX risk and position risk), operational risk and CVA risk in line with regulatory requirements (CRR).

For Credit risk, AEC Group uses standardized approach. Credit risk weighted assets are the sum of the exposure of balance sheet assets and off-balance sheet items multiplied by the appropriate credit risk weights, as defined in Article 113 of the CRR regulation. Credit risk weight for each individual position of the balance sheet assets and for each off-balance sheet item is determined on the basis of the class of exposure and the level of its credit quality. Additionally, credit risk for off-balance exposures is calculated by applying regulatory prescribed credit conversion factors (CCFs) to the different types of off-balance

INTERNAL

transaction. The capital requirement for credit risk is calculated by multiplying risk-weighted assets by 8%.

To calculate the capital requirement for market risks, Group uses methods prescribed by the regulation (more on that in point 12 of this Disclosure Report). Capital requirement for operational risks are calculated by applying basic indicator approach (more on that in point 13 of this Disclosure Report). Capital requirements for CVA risk are calculated using Standardized approach, as defined under CRR.

In the template EU OV1, AEC Group represents overview of risk weighted assets and capital requirements calculated in accordance with the Article 92 of the CRR. Capital requirements are broken down into different risk categories.

Table 12_EU OV1 Overview of total risk exposure amounts

		000 EUR

7. Exposure to Counterparty Credit Risk

(Article 439 of the CRR Regulation)

Counterparty credit risk within the Group is prescribed in Group Framework on Counterparty and Country Risk Limits. The purpose of this framework is to establish the basic principles, approaches, rules and procedures of the counterparty credit risk and country risk management on the Group level which

INTERNAL

include identification, measurement, management and reporting of counterparty risk. Additionally, this framework determines the process of approving, adopting and monitoring of the Agri Europe Cyprus Ltd. Group's limits to the counterparties. The primary objectives of the Group are to ensure sound credit risk management practices and that sufficient restrictions are in place to mitigate counterparty credit risk and country risk among all Group's entities.

The Group controls and mitigates counterparty credit risk to the extent possible given the investment strategy, ensuring lending is carried out in a prudent, secure and consistent manner and that major risks relating to lending are identified and assessed. The Group ensures segregation of duties so that the requestor and approver of new counterparties and limits are separated. Approved counterparties are listed per market and instrument, the list is easily accessible for the subsidiary trading functions. The Group selects and use counterparties with the aim of achieving cost efficient execution over time and has diversified counterparty structure to reduce concentration risk. An independent risk management function identifies, measures, monitors and reports counterparty risk and ensures sufficient restrictions and collateral are in place to mitigate counterparty credit risk.

Methodology used for the purpose of assigning the limits are based on credit ratings, two approaches are used - the use of an external credit rating of Fitch, Moody's or S&P if available or - in the event that the external credit rating is not available, the country rating will be used as well as key financial and non-financial operating parameters. Credit rating codes and classes of the proved ECAs are grouped into broader classes and transformed into determining the limit to financial institution. Furthermore a limit for counterparty at individual customer level is requested and approved according to the Group Framework on Underwriting.

Individual agreement between the counterparty and AEC Group is the basis for the collateral management. Basis for the market valuation is close of business market data. All received or paid collaterals are documented in the respective systems. Contractual clauses concerning dependencies between collateral management and the credit rating of AEC are not applicable as the Group is yet to be rated.

Counterparty credit risk is control through limit monitoring and reporting framework. Limit monitoring is executed in accordance with following principles:

- Monitoring shall include procedures ensuring that all policies and regulations related to counterparty risk management are being applied consistently and work as intended
- Independent monitoring of counterparty and country risk exposures shall be implemented through establishment of comprehensive reporting

Local Risk Controlling unit or other department/unit in charge for counterparty/country risk management monitors the counterparty limit's utilization at local subsidiary level on a daily basis. Also, those units are obliged to report on counterparty risk limits and exposures to the Group ALM Unit and Group Risk Controlling and Monitoring Unit on a daily basis.

Limit utilization by counterparty as well as aggregated monitoring per credit quality step are regularly reported to AEC Board Supervisory function by Group Risk Controlling and Monitoring Unit, through the Quarterly Risk Report. AEC Board Supervisory function receives information on limit utilization on a quarterly basis. AEC Board Management function receives information on limit utilization on a monthly basis

The steering of the risk mitigation techniques is situated in the Group Risk Controlling and Monitoring unit. The counterparty credit risk is assessed as part of the RWA calculation in Pillar 1. AEC Group applies the Original Exposure Method (OEM) calculated in accordance with Article 282 CRR (Chapter 6 of Title II Part Three, Section 5) as alternative approach to the Standardised Approach for counterparty credit risk (SA CCR). Netting is not used for regulatory purposes in AEC Group. No further collateral is considered to mitigate counterparty credit risk for regulatory purposes under Pillar 1.

For derivative transactions, exposure values before and after the effect of credit risk mitigation and associated risk exposure amounts broken down by applicable method is presented in the table below:

Table 13_EU CCR1 – Analysis of CCR exposure by approach

000 EUR

		a	b	c	d	e	f	g	h
		Replacement cost (RC)	Potential future exposure (PFE)	EEPE	Alpha used for computing regulatory exposure value	Exposure value pre-CRM	Exposure value post-CRM	Exposure value	RWEA
EU1	EU - Original Exposure Method (for derivatives)				1.4

2	Cash – other currencies	-	-	-	-	-	-	-	-
3	Domestic sovereign debt	-	-	-	-	-	182,425	-	-
4	Other sovereign debt	-	-	-	-	-	-	-	-
5	Government agency debt	-	-	-	-	-	-	-	-
6	Corporate bonds	-	-	-	-	-	-	-	-
7	Equity securities	-	-	-	-	-	-	-	-
8	Other collateral	-	-	-	-	-	-	-	-
9	Total	-	155	-	2,105	-	182,425	-	-

7.2. Derivative and securities financing transactions

AEC Group has no relevant values to show since CCP exposures are excluded from the template, so all values in template “EU CCR 1_Analysis of CCR exposure by approach” are equal to zero.

7.3. Transactions subject to own funds requirements for CVA risk

Table EU CCR2 provides an overview of the exposures subject to CVA capital charges in accordance with Part three, Title VI, Article 382 of CRR. Capital requirement are calculated in accordance with Standardized approach.

Table 15_EEU CCR2 – Transactions subject to own funds requirements for CVA risk

000 EUR

		a	b
		Exposure value	RWEA
1	Total transactions subject to the Advanced method	-	-
2	(i) VaR component (including the 3× multiplier)		-
3	(ii) stressed VaR component (including the 3× multiplier)		-
4	Transactions subject to the Standardised method	22,062	7,803
EU4	Transactions subject to the Alternative approach (Based on the Original Exposure Method)	-	-
5	Total transactions subject to own funds requirements for CVA risk	22,062	7,803

7.4. Exposure value to central counterparties and the associated risk exposures

AEC Group has no exposure value to central counterparties and associated risk exposures.

7.5. Notional amounts and fair value of credit derivative transaction

AEC Group does not have any single name CDS in the portfolio as of 31.12.2023

INTERNAL

7.6. CCR exposures by regulatory exposure class and risk weights

Table 16_EU CCR3 – Standardised approach – CCR exposures by regulatory exposure class and risk weights

8. Capital Buffers

(Article 440 of the CRR Regulation)

By introducing Basel III regulation, European legislation on capital introduced a system of capital buffers which are an additional requirement for determining the required amount of capital. Besides requirements that arise from the 1st and 2nd Basel pillar risks, the highest quality capital of banks (CET1) must also fulfil the capital buffer requirements. Failure to comply with the requirements regarding capital buffers results in restrictions in distributing the operating result with the purpose of strengthening the bank's capital base.

The table below contains the geographical distribution of the Group's credit exposure relevant for calculating the countercyclical capital buffer, as at 31 December 2023.

Table 17_EU CCyB1 - Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer in 000 EUR

The level of the Group's own countercyclical capital buffer is a weighted average of the applicable levels of countercyclical buffers for countries where the Group has relevant credit exposures. The level of the Group's own countercyclical buffer at the end of 2023 was 0.16%.

The table below presents the calculation of the amount of the Group's own countercyclical capital buffer, as at 31 December 2023.

Table 18_EU CCy-2 - Amount of institution-specific countercyclical capital buffer

		000 EUR
		a
1	Total risk exposure amount	5,916,120
2	Institution specific countercyclical capital buffer rate	0.16%
3	Institution specific countercyclical capital buffer requirement	9,466

9. Exposures to Credit Risk

(Article 442 a,b,c,d,e,f and g of the CRR Regulation)

9.1. Qualitative disclosure requirements related to credit risk

This section discloses information, as required in Article 442 of Regulation (EU) No. 575/2013.

The Group has established risk management system. The basic principles of risk management that the banking Group is exposed to or may be exposed to in its operations are set on the Group level. Risk management system includes the organization of the risk management process, identifying, measuring and assessing risks and the process of mitigation, monitoring and risk control as well as internal and regulatory risk reporting and framework and frequency of the implementation of stress test.

Credit risk management is an integral part of the risk management system. The objective of managing credit risk is to minimize the possibility of adverse effects on the financial result and the capital of the Group due to non-fulfilment of the obligations of the debtor. The credit risk management system includes: credit default risk, residual risk, settlement/delivery risk, credit counterparty risk, FX lending risk, credit risk induced by interest rate risk, dilution risk as well as concentration risk related to credit risk.

The process of credit risk management is carried out through the following phases:

- Identification of credit risk involves the determination of the current level of exposure to credit risk based on historical data.
- Measurement and assessment of credit risk include applying quantitative and qualitative criteria in order to classification debtor and their claims into the appropriate risk categories.
- Mitigation of credit risk involves the establishment of measures and rules for the application of these measures, relating to the acquisition, reduction, diversification, transfer and avoidance of risks.
- Monitoring and control of credit risk include determining the rules, frequency and methods for monitoring credit risk so that eventual deterioration in the financial condition and creditworthiness of the debtor and credit provider can be identified in time to avoid or reduce losses on this basis. In order to monitoring, the Group prescribes limits on Group level as well as level of subsidiaries taking into account an industry sector, geographical structure, product types and other similar characteristics of portfolio.

9.2. Definitions for Accounting Purposes of “Past Due” and “Impaired” and “past Due” and “Default”

Where any material amount of principal, interest or fee has not been paid at the date it was due, the Group recognizes this as the credit obligation past due. Where there are modifications of the schedule of credit obligations, the Group counting of days past due is based on the modified schedule of payments.

The Group defines default in accordance with the Article 178 CRR regulation. Default is defined as a delay of at least 90 days, in materially significant amount, at the level of exposure of the client.

INTERNAL

The default status may be identified even before the 90 day delay if other quantitative or qualitative criteria are identified that indicate the existence of objective evidence of impairment of a financial asset:

- Non-accrued status
- Specific credit risk adjustment (SCRA)
- Sale of credit obligations
- Distressed restructuring
- Bankruptcy proceedings
- Additional indicators of UTP - (Detail list of UTP triggers is defined in Group Policy on Default Detection).

Materially significant amount is defined in accordance with relevant ECB regulations for EU based credit institution subsidiaries.

Impaired items for accounting purposes are all items that are classified as Stage 3 according to IFRS 9.

Furthermore, in order to management of non-performing exposure, the Group adopted Group Policy on Forbearance, Restructuring and Workout Process and defines forbearance measures or forbore exposure. Forbearance measures represent concessions made to a borrower that is facing or could face situations of difficulties in meeting their original contractual commitments. Forborne exposure indicates contractual modifications granted to the borrower with financial difficulties. However, forbore exposure does not refer to renegotiations caused by any reasons other than financial difficulties.

Forborne exposure could be classified as non-performing exposure (Stage 3) or performing exposure (Stage 2). Forborne exposure could be classified as performing exposure (Stage 2) in case when a contractual change does not lead to a NPV loss for the Group or reclassified from non-performing exposure in case of conditions that are prescribed are met. Otherwise, forbearance exposure should be classified as non-performing exposure (Stage 3).

9.3. Description of the Approaches and Methods Adopted for Determining Credit Risk Adjustments

In accordance with IFRS 9, Group monthly:

- assesses the quality of receivables, determines whether there is objective evidence of impairment,
- assesses whether there has been a significant increase in credit risk in relation to the date of initial recognition and
- calculates the amount of impairment on the basis of expected losses.

Group Impairment Calculation Framework is adopted by AEC BoD and all credit institution subsidiaries align with this Framework as well as any regulatory requirements on local levels. Group recognizes impairment for all financial instruments that are measured at amortized cost.

Upon assessing the expected credit losses (impairment allowance calculation), Group assesses individual financial instruments (at the loan facility level) to determine whether there has been a significant increase in credit risk or default, and performs the following staging accordingly:

- Stage 1 includes all financial assets without a significant increase in credit risk since initial recognition at the reporting date;
- Stage 2 includes financial assets with a significant increase in credit risk since initial recognition, but without objective evidence of impairment; and
- Stage 3 includes financial assets with objective evidence of impairment at the reporting date.

Calculation of Impairment – Stage 1

For the purpose of calculating the impairment in Stage 1, the expected twelve-month credit losses are part of the expected credit losses over the entire term of the financial asset and represent cash shortages over the term that will result if default occurs within 12 months after the reporting date, weighted by the likelihood of such non-execution.

INTERNAL

Calculation of Impairment – Stage 2

The expected loss represents the probability weighted assessment of credit losses (i.e., the present value of all cash shortages) over the expected life of financial instrument, while the cash shortage itself is the difference between cash flows that belong to the Group and under the contract and cash flows that the Group expects to receive. Expected Credit Loss here represent probability-weighted estimates of credit losses (i.e., the present value of all cash shortages) that will arise over the expected life of a financial instrument, while the cash shortage itself is the difference between cash flows that belong to the Group under the contract and cash flows that the Group expects to receive.

Calculation of Impairment – Stage 3

Impairments calculation for exposures in stage 3 is done for all exposures with the identified default status.

In Stage 3, assessment of impairment could be done on individual and group basis depending on the individual significance of the exposure.

Individual assessment is performed for individually significant clients. Expected credit losses represent the probability weighted assessment of expected credit loss and the Group recognizes several possible collection scenarios when assessing expected future cash flows.

The scenarios that are taken into account are:

- realization of collateral,
- restructuring,
- bankruptcy,
- sale of receivables,
- collection from cash and
- other that is considered relevant.

When defining the scenario, Group takes into account the collection strategy defined for particular client.

For all other exposures, impairment is calculated on the group level, which implies the grouping of the remaining financial instruments in Stage 3 by the sub-segments depending on the portfolio structure.

The impairment value is calculated by using the residual LGD (PD is 100%). Residual LGD is calculated based on the number of months in default and recovery that has been discounted with EIR. LGD residual is applied to unsecured part of the exposure. When calculating the secured part of the exposure, only part of the exposure covered with hard collateral is taken into account.

Additionally, according to regulatory recommendation, Group developed and implemented new methodology for inclusion of novel risks in IFRS9 provisioning calculation. Novel risks taken into consideration are:

- Energy supply related risk,
- Supply chain constrains,
- Geopolitical risk,
- Climate and Environmental risk.

Supply chain constrains risk was quantified through Global Supply Chian Pressure Index (GSCPI) provided by Federal Reserve Bank of New York; energy supply-related risk was quantified through Energy Price Index provided by Eurostat. Climate and Environmental risk was quantified through the results of performed climate risk stress test and Geopolitical risk was quantified based on the assessment of current geopolitical situation. Final PD overlay was assessed as sum of all novel risk specific overlays for each subsidiary separately. More details on impaired exposures, risk adjustments as well as information on changes in value adjustment due to credit risk are disclosed in AEC Group Notes to the Consolidated Report and Financial Statements for the year ended December 31, 2023, 4.1 "Credit risk".

INTERNAL

9.4. Overview of performing, non-performing and forborne exposures for loans, debt securities and off-balance-sheet exposures

Information of the amount and the quality of portfolio is shown in the following tables:

Table 19_EU CR1: Performing and non-performing exposures and related provisions

**9.8. Breakdown of loans and debt securities by residual maturity**

Table 25_EU CR1-A: Maturity of exposures

000 EUR

		a	b	c	d	e	f
		Net exposure value					
		On demand	<= 1 year	> 1 year <= 5 years	> 5 years	No stated maturity	Total
1	Loans and advances	-	2,987,838	475,472	813,580		4,276,890
2	Debt securities	-	180,955	34,230	202,278		215,185
3	Total	-	3,168,793	509,702	813,580	-	4,492,075

The maturity of exposure to legal entity is up to five years, while maturity of exposure to private individuals is mostly over five years.

10. Encumbered and Unencumbered Assets

(Article 443 of the CRR Regulation)

Asset encumbrance presents part of liquidity risk management. Group regularly monitors and reports on asset encumbrance. The increase in the volume of encumbered assets contributes to higher liquidity risk and the risk of financing, since an institution with encumbered assets has fewer available assets for pledging, used as liquidity reserve for unexpected liquidity needs. Group must ensure that it has at every moment enough high-quality liquid assets, so it is able to meet all liquidity needs. According to Group Liquidity Risk Management and Liquidity Stress Testing Framework, the unencumbered assets represent a liquidity buffer, which includes cash, money market placements and high-quality ECB eligible debt securities. The Group holds high amount of liquidity buffer which can be used for filling funding gaps between cash inflows and outflows at any time during 30 days stress period.

Group asset encumbrance are monitored and reported regularly on Group and subsidiaries level, and quarterly reports are submitted to the regulator. All assets that are pledged are reported as encumbered assets and majority relates to Gorenjska banka d.d. Regarding a transparent way of reporting, Group has no example of giving the pledge which then would not be included in reporting. There is also no difference between the regulatory consolidation scope and liquidity requirements on an IFRS consolidated basis. Liquidity remains sound with regulatory liquidity ratios materially above minimum requirements. According to Basel III, Group monthly assures that its LCR ratio is higher than 100% (385.7% at the end of December 2023) which indicates that the Group does not need any additional liquidity to withstand cash outflows during sever 30 days stress. Group has a strong liquidity position; all internal liquidity risk indicators are stable and within prescribed limits defined by Group Liquidity Risk Management and Liquidity Stress Testing Framework.

In 2023, the Group had its assets encumbered:

- due to placed deposits which represents obligatory reserves;
- due to ensuring liquid assets of the bank resolution fund;
- due to security with cash assets paid in clearing systems, central counterparties and other institutions for infrastructures as a prerequisite to access services (guarantee scheme SEPA) and
- due to security for claims of foreign commercial banks, based on the bank-provided counter guarantees and credits.

Assets encumbered consist of debt securities and placed deposits. The amount of encumbered assets is denominated in EUR currency. There are no other significant currencies of asset encumbrance to be reported.

The values in tables EU AE1, EU AE2 and EU AE3 represents the median values for 2023, in accordance with the Regulation AE, calculated using the median quarterly data reported over the last twelve months.

The Group does not have any encumbered collateral received or own debt securities issued.

**INTERNAL**

Among the unencumbered assets from template EU AE1, 5.5% items are not available for encumbrance in regular operations. These are cash in the cash register, intangible assets, deferred assets, tangible fixed assets, investment property, equity investments in affiliated companies, non-current assets available for sale and other non-finance assets (such items are included among other assets in template EU AE1).

In case of secured receivables of foreign commercial banks on the basis of the counter-guarantees and letters of credit assured by the bank, the bank is ensuring insurance to foreign commercial banks in the value of at least 100% of the value of a receivable, provided the receivable is in domestic currency or, respectively, of at least 125% of the value of a receivable in case the receivable is in foreign currency. Maturity of insurance must be longer than maturity of receivables of foreign commercial banks.

11. Use of Standardized Approach

(Article 444 a,b,c and e of the CRR Regulation)

11.1. Use of external ratings

AEC Group applies Standardized approach for calculation of risk weighted exposure amount for credit risk pursuant to Basel 3 regulation, all in line with EBA CRR, Chapter 2, Title II, part Three. Exposures to a client, for which a credit assessment by a nominated ECAI is available, are assigned a risk weight that is prescribed by EBA CRR, which corresponds to the credit assessment of ECAI (External Credit Assessment Institution) in accordance with Article 136 of CRR.

AEC Group nominated the Moody's Investor Service (Moody's) credit risk assessment institution to determine the risk weights for calculating the capital requirements for credit risk. No ECA (Export Credit Insurance Agency) has been nominated for external ratings determination by AEC Group.

Following Moody's Rating Scale has been used in determination of risk weights for calculating the capital requirements for credit risk:

Moody's		Risk Characteristics
Long Term	Short Term	
Aaa	P-1	Prime
Aa1		High Grade
Aa2		
Aa3		
A1		Upper Medium Grade
A2		
A3		
Baa1	P-2	Lower Medium Grade
Baa2	P-3	
Baa3		
Ba1	Not Prime	Non-Investment grade speculative
Ba2		
Ba3		
B1		Highly speculative
B2		
B3		
Caa1		Substantial Risks
Caa2		Extremely Speculative
Caa3		In Default with low prospect for recovery
Ca		In Default
C		

Figure 3_Moody's rating scale and mapping

ECAI risk assessment is used for all exposure classes, where available. Mainly, ECAI external ratings are used for determining the credit quality level for exposures to sovereigns and central banks and for exposures to banks, since for these clients/exposures external ratings are available.

When determining risk weights, based on available credit assessments of the debtor and their financial instruments, the Group acts in accordance with the CRR regulation. AEC Group complies with the standard association of the external rating of Moody's with the risk weights that correspond to the credit quality steps as set out in Chapter 2 of Title II of Part Three published by EBA. In order to map primary credit assessments with the levels of credit quality, the table of mapping in Annex III of the Commission Implementing Regulation (EU) 2016/1799 of 7 October 2016 laying down implementing technical standards with regard to the mapping of credit assessments of external credit assessment institutions for credit risk in accordance with Articles 136(1) and 136(3) of CRR is used.

11.2. The Exposure Values and the Exposure Values after Credit Risk Mitigation Associated with Each Credit Quality Step, as Well as those Deducted from Own Funds

The Group maps the ratings made by external credit assessment institutions to credit quality steps from 1 to 6. It only takes into account the credit assessments of nominated external credit assessment institutions for claims in certain exposure class.

The table EU CR4 presented below illustrates effects of credit risk mitigation techniques that AEC Group uses, as of 31.12.2023:

Table 29_EU CR4 – standardised approach – Credit risk exposure and CRM effects

000 EUR

Exposure classes	Exposures before CCF and before CRM		Exposures post CCF and post CRM		RWAs and RWAs density	
	On-balance-sheet exposures	Off-balance-sheet exposures	On-balance-sheet exposures	Off-balance-sheet exposures	RWEA	RWEA density (%)
	a	b	c	d	e	f

12. Market Risk

(Article 445 of the CRR Regulation)

12.1. Qualitative disclosure requirements related to market risk

The businesses of the Group are subject to market risk, which shall imply the possibility of occurrence of adverse effects on the bank's financial result and capital due to changes in the value of balance-sheet positions and off-balance sheet items arising from changes of prices in the market. The objective of market risk management is to maintain the level of exposure to market risk within acceptable frameworks, prescribed in risk appetite statement, with its defined strategy.

Market risk management within the Group is prescribed in Group Policy on Market Risk Management. This document sets out the basic principles of market risk management on the Group level and defines the organization of the market risk management process among members of a banking group where Agri Europe Cyprus Limited is an ultimate finance holding company. In addition, this Policy defines the process of internal and regulatory risk reporting, as well as the framework and frequency of the implementation of stress tests.

Market risk is organized in a way that responsibilities and roles are divided among different business and organizational units. Overall responsibility for market risk management lies with AEC BoD (Supervisory and Management Function), in charge for adopting decisions concerning market risk management and provides guidelines, sets up of RAS and other internal limits, approves and revises relevant documents from market risk area on Group and solo level. In order to ensure an efficient and comprehensive market risk management process across an organization, the Group implemented three lines of defense principle in its market risk governance framework:

- The first line of defense: risk taking unit

Market risk taking unit is a business unit that is taking positions exposed to market risk. Group ALM and Local Treasury and ALM Unit are the principal market risk taking units. The particular risk taking unit has primarily responsibility for the day-to-day risk management within the agreed risk limits which includes decision making on particular transactions. This risk taking unit is also responsible for the implementation of risk governance principles.

- The second line of defense: risk management unit and compliance

The Risk management unit is responsible for further identifying, measuring, monitoring and reporting risks independently from risk-taking unit. The Risk management unit shall not be involved into any operational activities of business units and should not be involved into revenue generation.

- The third line of defense: internal audit

Internal Audit should provide an independent assurance on the quality and effectiveness of a bank's internal control, risk management and governance systems and processes. Internal Audit is also responsible for the independent overseeing of risk-taking and risk management units.

Market risk management process on solo level (i.e. credit institution subsidiary) is an integral part of the Group risk management system and it is harmonized with the Group's Risk Management Strategy, regulatory requirements, international standards and best practices, while respecting the specifics of business activities and strategic goals. Subsidiaries are obliged to align with the Group process, but also with any regulatory requirements on local level, considering its size, nature, complexity and impact on risk exposure on the Group level.

Group Risk Controlling and Monitoring Unit is in charge for market risk management on Group level. In order to achieve the objective of market risk management, Group Risk Controlling and Monitoring Unit closely cooperates with risk taking units and other support groups. On credit institution subsidiary level, risk taking unit and risk management units are allocated to separate departments and units, ensuring the adequate segregation of duties in accordance with regulatory requirements and best practices, and adequate market risk management. Each subsidiary monitors indicators and limits defined in the Group RAS and reports to the Group Risk Controlling and Monitoring Unit on those indicators. Group Risk

INTERNAL

Controlling and Monitoring Unit calculates market risk indicators on Group level. Governance of market risk management is established and implemented through framework with following phases: risk identification and materiality assessment process, mitigation, monitoring, control and market risk reporting. By identifying market risks, subsidiaries timely identify the causes that lead to exposure to market risks and include determining the current exposure to market risks.

In order to effectively control market risk, the organizational unit responsible for market risks management of subsidiaries monitors daily deviations from the defined internal and regulatory limits. The responsible organizational unit for managing the assets and balance of each subsidiary at daily level controls, monitors, manages and adjusts the foreign currency position by using available instruments, monitors the movement of foreign exchange rates and, in accordance with the same, keeps open or closed foreign currency position within the regulatory and internal limits. It also manages trading book positions in accordance with pre-defined limits, taking into account the fulfilment of the necessary conditions for taking positions from the Trading Book.

Market risk reporting includes a system of external and internal reporting on the management of market risks. External reporting is carried out in accordance with the requirements of the regulator. Market risk reporting also implies for ad-hoc internal or external reports, based on needs of internal and external stakeholders. Scope and nature of risk reporting is prescribed in section "The Scope and Nature of Risk Reporting".

The Group does not apply any form of hedge accounting according to IFRS accounting standards. However, some of the entities, e.g. AIK Bank performs fx swaps in order to hedge fx risk and also liquidity position. This way, AIK Bank has more stronger control over its fx open currency position.

FX Risk - Subsidiaries carry out the identification of foreign exchange currency risk exposure using open positions in a single currency and total for all currencies in which they operate. Open foreign currency position in all currencies and in total is the basis of measurement and evaluation of foreign exchange currency risk exposure. In order to reduce foreign exchange currency risk, the basic measure to be taken is to close the foreign exchange position by identifying and applying adequate techniques involving the contracting of standard and derivative instruments, as well as measures in part of the funds and sources of funds - through the granting of loans / taking deposits with a foreign currency clause. Each subsidiary carries out continuous mitigation of foreign exchange risk by maintaining risk at an acceptable level in accordance with internal and regulatory limits. In order to reduce foreign exchange risk, the basic measure to be taken is to close the foreign exchange position by identifying and applying adequate techniques involving the contracting of standard and derivative instruments, as well as measures in part of the funds and sources of funds - through the granting of loans / taking deposits with a foreign currency clause. Foreign exchange risk monitoring primarily involves an analysis of the situation, changes and trends in foreign exchange risk exposure. Foreign currency risk monitoring also includes the projection of foreign currency risk in order to reduce the exposure to foreign exchange risk. Foreign currency risk projection enables the definition of preventive measures to reduce exposure to foreign exchange risk. Group performs stress test of fx risk according to the ESRB Macro-financial scenario EU-wide banking sector stress test and corresponding table "Shocks to foreign exchange rates".

Position risk - Each subsidiary, that has items allocated in trading book, performs the identification of the exposure to the position risk of debt and equity securities based on the value of positions in the Trading book that are monitored daily (the changes in their current market prices -mark-to-market or in accordance with the appropriate valuation models -mark-to-model). When determining if the financial instrument should be included in the Trading Book, subsidiaries take into consideration that at the moment of obtaining financial instruments, there is an intention to sell them in the short term after acquisition or to realize profit on the basis of the actual / expected difference between their purchase and sale price, or on the basis of other changes in prices or interest rates. Position risk mitigation is carried out continuously through risk management at an acceptable level, as well as by identifying and implementing adequate measures and techniques. Defining the limit in the Trading Book and defining and implementing measures to mitigate position risk is characterized by the phase of position risk mitigation. The basic principles of position risk management involve maintaining the level of risk in accordance with internally defined limits at the Trading book level, daily monitoring of market changes that may affect the increase in exposure to risks Trading book and determining measures to reduce risk exposure Trading book when changing the weight of the upper limit of accepted risk. The goal of active

INTERNAL

management is to reduce position risks to an acceptable level that can be controlled, and which ensures maximization of profit while minimizing risk. Stress test of position risk is done based on "ESRB 2023 EU-wide stress test - Market risk shocks" and corresponding table "Equity, Commodities and Funds - relative changes" which has developed scenario triggered by a shock to equity prices in global financial.

Credit spread risk in banking book (CSRBB)

Credit spread risk in banking book (CSRBB) is defined as a risk driven by changes of the market price for credit risk, for liquidity and for potentially other characteristics of credit-risky instruments, changing spread while assuming the same level of creditworthiness, i.e. how the credit spread is moving within a certain rating/PD range.

The objective of credit spread risk management is to maintain the level of exposure to credit spread risks at an acceptable level while at the same time maximizing the financial result by taking positions in existing and new products on the market.

CSRBB captures a combination of two elements:

- The changes of the "market credit spread" or "market price of credit risk" (distinct from the idiosyncratic credit spread) representing the credit risk premium required by market participants for a given credit quality;
- The changes of the "market liquidity spread" representing the liquidity premium that sparks market appetite for investments and presence of willing buyers and sellers.

As of 31.12.2023, credit spread risk is assessed for wholesale and government debt securities portfolio at fair value through other comprehensive income (FVOCI) and securities portfolio – financial asset at amortized cost (AC). Group calculated CSRBB under ICAAP based on "swap rate" projections sourced from the ESRB stress test scenarios and corresponding tables for baseline Swap rates, Sovereign credit spreads - absolute changes (basis points) and Corporate credit spreads – absolute change (basis points).

12.2. Market Risk Standardized Approach

Capital requirement for market risk under standardized approach is the sum of capital requirement for position risk in equities, capital requirement for position risk in traded debt instruments and capital requirement for fx risk.

Capital requirement for position risk in equities is the sum of general and specific risk, with risk weighted exposure of 16,377 thousand EUR as of December 31, 2023.

Capital requirement for position risk in traded debt instruments (interest rate swaps) is the sum of general and specific risk, with risk weighted exposure of 204 thousand EUR, as of December 31, 2023.

Risk weighted exposure amount for foreign currency exchange risk is calculated through calculating net open foreign currency position on Group level. An open foreign currency position is the difference between foreign currency receivables and liabilities, as well as receivables and liabilities in a local currency indexed by a currency clause (including the absolute value of a net open position in gold). Risk weighted exposure amounted of 42,620 thousand EUR as of December 31, 2023 for fx risk.

Group isn't exposed to commodity risk and has no correlation trading portfolio, namely positions in securitisation and credit derivatives based on the n-th default.

As of December 31, 2023, risk weighted exposure for market risk under standardized approach is 59, 202 thousand EUR.

Table 29_EU MR1 - Market risk under the standardised approach

000 EUR

		a RWEAs

13. Operational Risk Management

(Article 446 of the CRR Regulation)

Operational risk is the risk of loss as a result of unsuitable or unsuccessful performance of internal processes, the conduct of people, the functioning of systems, or external factors, and also includes information risks, compliance risks, legal risk, and model risk.

Legal risk is understood by the Bank as the risk of losses due to inappropriate or late detection and, consequently, consideration of changes in the legal and regulatory environment, as well as the risk of losses due to legal weaknesses or non-compliances in contract acts and other documents.

The objective of managing operational risk consists in the fact that each subsidiary: identifies events that represent operational risk sources, classifies identified events into predefined categories of losses events, monitors their frequency and importance by defined lines of business in accordance with their organization and activity, as well as to form a database on events arising from operational risk.

Identification of operational risks implies identifying events that represent sources of operational risk that each subsidiary may be exposed to. Operational risks are identified for all significant products, processes, systems, and external factors. Identification of operational risk takes place through a combination of preparing a map of operational risks, performing self-assessments and risk control, as well as by collecting data on events that are considered operational risk.

Each subsidiary measure, i.e. estimate exposure to operational risk, taking into account the possibility, that is, the frequency of the occurrence of that risk, as well as its potential impact on its outcome, with particular reference to events that are deemed unlikely to arise, but it is assumed or it is known that if they occur, they can cause major material losses.

In measuring or assessing operational risk, each subsidiary assesses in particular whether this risk is exposed or can be exposed on the basis of the introduction of new products, activities, processes and systems, and assesses whether and how the activities whose performance it intends to entrust to third parties, influence the level of operational risks.

Each subsidiary measures exposure to operational risks in quantitative and qualitative terms. The quality and comprehensiveness of the measurement must be sufficient to ensure efficient decision-making. Measurement includes risk assessment, scenario analysis and data collection on operational risk events.

Based on the results of the activities of identification and assessment of operational risk, measures to mitigate this risk are defined.

Mitigation of operational risk involves the establishment of measures and rules for the application of these measures, relating to the taking, reduction, transfer and avoidance of risks identified, measured and estimated by each subsidiary.

Operational risk mitigation is achieved by:

INTERNAL

- consistent application of procedures for identification, measurement and risk assessment of each subsidiary;
- by proposing, by the competent organizational units of the credit institution subsidiary, measures to prevent or control, reduce and eliminate the causes of operational risk.

One of the segments of operational risk management includes the consideration of stress test results. The assumptions used for stress tests are defined on the subsidiary level based on the local specifics and must be properly documented.

The organizational unit responsible for controlling the operational risks at the level of subsidiaries follows the results of the scenario and informs the Group Risk Controlling and Monitoring Unit.

Operational risk reporting includes a system of external and internal reporting on operational risk management. External reporting is carried out in accordance with the requirements of the regulator.

The organizational unit of each subsidiary in charge of controlling operational risk is obliged to report in a timely and adequate manner to the Group Risk Controlling and Monitoring Unit, on information on the activities and risks arising from operational risk events.

Each subsidiary reports to the Group's Risk Control function:

- ad-hoc reports of high-loss events,
- quarter-y - includes the assessment and analysis of operational risk exposure (analysis of collected data on operational risk events, proposals and deadlines for mitigating the greatest operational risks, as well as responsible persons/organizational units in charge of taking proposed measures, self-assessment results, etc.).

At the request of the Gr'up's bodies and committees, reports may include other information relevant for operational risk monitoring.

Considering its size, organisation and scale of operations, the Group uses the basic indicator approach to calculate the capital requirement for operational risk.

Capital requirement calculated according to the basic indicator approach equals 15% of a three-year average of the sum of net interest and non-interest income. On 31st December 2023, it amounted to 54,022 thousand EUR.

Table 30_EU OR1 - Operational risk own funds requirements and risk-weighted exposure amounts

000 EUR

Banking activities		a	b	c	d	e
		Relevant indicator			Own funds requirements	Risk exposure amount
		Year-3	Year-2	Last year		
1	Banking activities subject to basic indicator approach (BIA)	327,133	331,123	422,192	54,022	675,280
2	Banking activities subject to standardised (TSA) / alternative standardised (ASA) approaches					
3	Subject to TSA:					
4	Subject to ASA:					
5	Banking activities subject to advanced measurement approaches AMA					

14. Exposure to Interest Rate Risk on Positions Not Included in the Trading Book

(Article 448 of the CRR Regulation)

14.1. Qualitative information on interest rate risk in the banking book

Interest rate risk is the risk of occurrence of interest rate loss that affects changes in the value of interest rate sensitive assets and liabilities. The loss arises due to a maturity of the assets and liabilities or a mismatch in the type of interest rate or the period in which the interest rate is re-determined. Interest rate changes have a significant impact on net interest income (NII). Interest rate changes also affect the balance sheet value and, consequently, the economic value of equity (EVE), the accounting and

INTERNAL

regulatory capital of the Group and members of the Group. Interest rate risk management process consists of identification and materiality assessment process, measuring, monitoring, managing and reporting interest rate risk. There aren't any hedging activities.

IRRBB gap analysis methodology is used within the Group, to measure interest rate risk. It shows the difference between the cash flows of interest rate sensitive assets and interest rate sensitive liabilities by individual predefined time buckets. All interest-sensitive items are allocated in time buckets according to the interest rate change date. In the case of a fixed interest rate, the final maturity date is taken into account, and in the case of a variable interest rate, the interest rate repricing date is taken into account. The Group has an established system for monitoring interest risk to ensure an adequate level of net interest income and an adequate level of the Group's capital in the environment of changing interest rates. It is the Group's policy to regularly monitor and control the Group's exposure to interest risk, to develop scenarios of interest rate development, and to prepare measures in the event of interest movements that could seriously negatively impact the net interest income and the Group's capital.

The system of interest rate risk limits, checked against net interest income and economic value of equity is used to test an effect of interest rate shock scenarios. Concerning NII, impact of 100bp change in interest rates on net interest income over a one year period curve. When assessing the impact on the Group's capital, under six different interest rate shock scenarios defined by the European Banking Authority (EBA), the result with most adverse effect is used for measuring the economic value of equity. The management of interest rate risks is based on a limit system for exposure to interest rate risk.

Besides regulatory determined limits, the Group has prescribed internal limits in RAS concerning IRR:

- Sensitivity of EVE (Parallel shift 200bp)/Own Funds,
- Sensitivity of EVE (6 scenarios)/Tier 1 in stress scenario,
- Δ NII/Own Funds (under parallel shift 100bp).

Group Risk Controlling and Monitoring Unit calculates interest rate gaps and impact of interest rate changes on NII and EVE at the consolidated level and reports to the AEC Board in its Management Function and in its Supervisory function at least quarterly. IRRBB identification, measurement, monitoring and control processes are reviewed by Internal auditing function on a regular basis and reports are submitted to relevant competent authorities.

For certain interest rate sensitive items, the contractual maturity is not known or they are less amenable to standardisation unlike positions that are amenable to standardisation (as fixed rate and floating rate positions). Therefore, the Group prescribes the process for positions that are less amenable to standardisation and for which contractual maturity is not known. The Group assigns non-contractual positions and positions not amendable to standardisation based on historical data and the characteristics of the markets in which they operate.

The following types of interest rate sensitive positions not amendable to standardization have been recognized:

Non-maturing deposits (NMDs) - include balances on transaction accounts and savings deposits or savings accounts in the part that is insight. NMDs are classified in accordance with the time serious model of non-maturing deposits, which defines a methodology for assigning of non-maturity deposits into time buckets, distinguishing between stable and unstable deposits and between core and non-core deposits. Modelling of non-maturing deposits meets regulatory requirements and recommendations under the EBA IRRBB Guidelines (Article 7 of EBA/RTS/2022/09) and BIS IRRBB Standards.

In line with Article 7 of EBA/RTS/2022/09, the Group classifies non-maturity deposits according to the counterparty as follows:

- Retail non-maturity deposits, further classified into:
 - Retail transactional deposits
 - Retail non-transactional deposits
- Wholesale non-maturity deposits, further classified into:
 - Wholesale deposits of financial customers

INTERNAL

- Wholesale non-financial deposits.

Each credit institution subsidiary shall distinguish the stable from the non-stable part of the retail transactional and non-transactional and the wholesale non-financial deposits referred using observed changes of the volume of the deposits due to upward and downward movements of the risk-free interest rate for a period of at least the preceding ten years, based on time series model. Monte Carlo method was used to simulate time series of growth rates by randomly selecting them from historical growth rates set. The second step is to determine a core and a non-core component within the stable part of the non-maturity deposits. In scenarios prescribing an increase of short-term interest rates, the core component shall be multiplied by 0.8 and the non-core component shall increase accordingly. In scenarios prescribing a downward movement of short-term interest rates, the core component shall be multiplied by 1.2 and the non-core component shall decrease accordingly. Furthermore, the stable part of sight deposits is classified on core and non-core part, while the core part is related to stable NMDs which are unlikely to reprice even under significant changes in the interest rate environment and/or other deposits for which the Group could modelled deposits movement in compliance with interest rate changes. For the reporting period the average repricing maturity assigned to retail demand deposits is around 1.9 years in EUR currency and 1.6 years in RSD currency, while the longest repricing maturity is 5 years. Average repricing maturity assigned to corporate non-maturing deposits is below 1Y in EUR and RSD currency as well.

Overdraft - The Group treats the limits on transaction accounts as items with a maturity date and classifies them into the bucket of final maturity.

Revolving loans - are classified according to the type of interest rate. In the case of a fixed interest rate, interest rate sensitive items are allocated on the maturity date, and in the case of a variable interest rate, the interest rate repricing date is taken into account.

Products with behavioral modelling component includes the following:

- Fixed rate loans subject to prepayment risk
- Term deposits subject to early redemption risk

Early repayment rates for loans with fixed interest rate and early withdrawal rate for deposits with fixed interest rate have been determined based on historical data of redemptions in at 1-year observation period, per corporate/retail segment separately.

Compared to previous disclosure report, new regulatory requirements in accordance with EBA/GL/2022/14, EBA/RTS/2022/09 and EBA/RTS/2022/10, have been implemented.

14.2. Changes in the economic value of equity and net interest income

Table 31_EU IRRBB1 - Interest rate risks of non-trading book activities

000 EUR

Supervisory shock scenarios		a	b	c	d
		Changes of the economic value of equity		Changes of the net interest income	
		31.12.2023	31.12.2022	31.12.2023	31.12.2022
1	Parallel up	(43,348)	(28,473)	40,426	30,188
2	Parallel down	3,370	11,355	(40,426)	(30,188)
3	Steeper	(47,498)	(26,163)		
4	Flatter	37,103	10,847		
5	Short rates up	(17,749)	(2,598)		
6	Short rates down	(5,984)	1,096		

The table shows an impact on net interest income in the non-trading book, but also the change of the economic value of equity in the banking book under six scenarios, after applied embedded options.

The maximum EVE impact was in Steeper scenario in loss of 47,498 thousand EUR as of December 31, 2023. Net interest income loss as of December 31, 2023 was 40,426 thousand EUR in parallel down scenario (+200bp for EUR and +300bp for RSD). The main risk drivers are government bonds, held as liquidity buffer, especially in RSD currency, loans with fixed IR and deposits with fixed IR. Implementation of new regulatory requirements, especially treatment of core component of NMDs in different scenarios,

is in place starting from 31.12.2023. Also, key market rates have been used in Δ EVE calculation, that caused greater discounting factors to multiply with IRR position.

15. Climate related and Environmental risk

(Article 449a of the CRR Regulation)

ESG disclosures are included in accordance with Article 449a CRR. In addition, in line with the Integration of ESG pillar 3 disclosures into DPM and taxonomy to support the implementation of the EBA Decision EBA/DC/498, AEC Group reported forms D 01.00 - Banking book- Indicators of potential climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity, D 02.00.a - Banking book - Indicators of potential climate change transition risk: Loans collateralised by immovable property - Energy efficiency of the collateral (I) and D 02.00.b - Banking book - Indicators of potential climate change transition risk: Loans collateralised by immovable property - Energy efficiency of the collateral (II), namely for the reference date Q4 2023. The reports were submitted by 15 March 2024, whereby reporting took place via ITS according to DPM 3.3.

AEC Group is large institution but has no publicly listed issuances, so is not obliged to disclose information required under 449a of CRR. Based on ECB's Guide on climate related and environmental risks, AEC Group discloses information on Climate related and environmental risk (C&E).

15.1. Governance arrangements on environmental and climate related risk management

The AEC Group is committed to the United Nations Sustainable Development Goals (SDGs) and the Paris Agreement as a global plan for the transition to a low-carbon economy and achieving Net-zero target. Therefore, AEC Group recognizes the crucial role of its management bodies in the process of Climate-related and Environmental Risks.

The Group defines ESG governance model in terms of the establishment of the adequate governance structures that requires implementation on local subsidiaries level to be in line with Group standards, adjusted to local specifics and regulations. Picture below presents the ESG governance model of the Group and its subsidiaries:

Figure 4_ESG Governance model

Board of Directors in its Supervisory function with **Risk Committee** approves sustainability strategy and ESG framework and oversees the implementation.

Risk Committee primarily oversees all identified risks to which the Group is exposed. The RC will pay special attention to the existence of **new types of risks** (especially emerging risks), that can have material impact on traditional type of risks through various transmission channel.

INTERNAL

Board of Directors in its Management function defines sustainability strategy and is responsible for ESG framework, priorities and goals. It ensures implementation of sustainability strategy. Roles and responsibilities of Board of Directors in its Supervisory and Management functions, as well as roles and responsibilities of Risk Committee are defined in Group Policy on Internal Governance.

Group ESG & sustainability management focuses on management and strategic development of ESG Strategy and implementation of operational measures.

The local sustainability officer is responsible for implementation of ESG governance model and measures on local level in line with Group standards. As defined in the ESG Strategy, there are designated employees, Sustainability officers as a horizontal point of contact to ensure that climate-related and environmental risks were appropriately integrated into Group risk management framework.

The first line of defense represents the **front office, business and underwriting units** with the main role of performing duties in accordance with C&E risk framework, procedure and defined RAS limits. It identifies, assesses and monitors any C&E risks relevant for the creditworthiness of a client. First line roles are directly aligned with the delivery of products to clients and include the roles of leading actions to achieve objectives defined in the Group Business and ESG Strategy.

The second line of defense is executed by risk management and compliance functions. The main responsibility of the **risk management function** is to ensure that all risks are identified, assessed, measured, monitored, managed and properly reported by the relevant units on the Group and subsidiary level. The risk management function provides relevant information, analyses and expert judgement on C&E risk exposures. Since C&E risks materialize through existing financial risks, the tasks and responsibilities are embedded in the framework of the existing management system. **The compliance function** is responsible for ensuring that compliance risks stemming from C&E risks are duly considered and effectively integrated in all relevant processes. The compliance function advises the management body (in its management and supervisory function) on measures to be taken to ensure compliance with applicable laws, regulations and standards, and assess the possible impact of any changes in the legal or regulatory environment on the institution's activities and compliance framework.

Third line of defense is executed by the **internal audit** which considers in its reviews the extent to which the Group is equipped to manage C&E-related risks. The internal audit function reviews the Group's internal control and risk management framework, by considering external developments, changes in the risk profile and in products and/or business lines, among other things. This is expected to include the appropriateness of the arrangements for managing C&E-related risks.

Group Risk Management Function (GRMF) implements the strategic orientation of the Group. Risk management is primarily task of **Group Chief Risk Officer (CRO)** while the GRMF as a collective function has the controlling function in respect of monitoring the implementation of the Group Strategy on Risk Management and Risk Appetite on the subsidiary level. CRO reports with the GRMF to Group Supervisory function. CRO is responsible for setting up comprehensive risk management framework on the Group level, oversees and manages GRMF and coordinates the preparation of Group Strategy on Risk Management and Group Risk appetite statement. CRO plays a key role in further enhancement of risk awareness of its employees and strengthening the risk culture on the Group level. Incorporation of emerging risks that impact traditional types of risks via transmission channels and that are material to the Group (most significant emerging type of risks are ESG risks, more specifically climate & environmental risks) into risk management framework is the responsibility of GRMF that coordinates the whole process.

15.2. ESG Strategy and objectives

The Group has adopted the **ESG Strategy 2024-2026** which is included in the overall **Group Banking Strategy 2024-2026** with main targets to be recognized as ESG banking group in Adriatic region, to create sustainable value for clients, communities & society and employees and clear ESG positioning towards the different internal and external stakeholders. Becoming aware of the Group's role and impact on the further development of the ESG area, ESG goals are included in internal acts and processes, as well as in planned measures to adjust current investment and credit portfolio.

INTERNAL

The Group recognises that data collection for better quantification is necessary to improve over time in order to better quantifying physical risks, providing a robust foundation for risk assessment and mitigation. These initiatives are contributing to proactively managing C&E risks.

The goals of the UN and the ESG approach offer a strategic framework that directs the AEC Group in the development and growth towards the sustainability of the organisation, products and services. Selected Sustainable Development Goals (SDG) through the lens of ESG are the following:

During 2023, the Group has significantly increase the awareness of its employees related to ESG by implementing ESG trainings mainly related to climate-related and environmental risks according to the ESG Training agenda which presents the list of topics to be covered on a dedicated trainings tailored to the business needs of different organizational units in the Group.

Considering the great importance of ensuring adequate knowledge related to climate-related and environmental risks of all members of the management body, as one of the first steps that was taken was training for all members of the Board of Directors including Management and Supervisory Function.

15.3. Materiality assessment of C&E risks

Materiality assessment of C&E Risks is performed during 2023 according to the recommendations from ECB Thematic Review on Climate and Environmental Risks 2022, and it was upgraded in terms of the regular process of maintenance and development of the materiality assessment heatmaps. Materiality assessment was performed based on the results from the quantitative analysis that considered released scenarios and related shocks on key macro-indicators. Used inputs for each scenario relate to ECB 2022 climate risk stress test assumptions. Quantitative analysis was extended to all portfolios, industries, geographies in all banks that operates within the Group. After acquisition of the Eurobank Direktna in November 2023, final update of the Materiality assessment report, at the Group level, is performed.

The Group acknowledges the fact that methodologies for estimation of the magnitude of the impact of C&E risks, are being developed rapidly and are evolving continuously. The Group performed comprehensive materiality assessment considering the specificities of the respective business model, operating environment and risk profile of the Group, taking into account impact on Group's products and services, operations (including types of operations and location of facilities) for each subsidiary/market where the Group operates.

In the materiality assessment, the Group considers the wide spectrum of risk drivers and related transmission channels stemming from climate change and environmental degradation.

INTERNAL

Group recognizes C&E risks as risk drivers that materialize in existing risk categories and distinguish between the various drivers of transition and physical risks. Materiality assessment of the impact of C&E risk drivers is carried out following standard steps that ensure transparency of the process:

- Identification of risk drivers and transmission channels;
- Gathering of the expert assessments;
- Preparation of the portfolio analysis;
- Implementation of the qualitative and quantitative methods of analysis;
- Interpretation of the results and conclusion on materiality assessment.

Identification of risk drivers and transmission channels

In the first step of materiality assessment the Group identifies risk drivers. Physical and transition risk drivers were considered in the materiality assessment.

Wide range of physical risk drivers were examined. We have used all available data sources to identify and examine relevant risk drivers. Physical risk drivers were separately examined considering geography where clients/collaterals are positioned. Mapping of collaterals to high physical risk areas is performed following Thinkhazard maps. These maps are considered as the most conservative ones since they are provided at regional level, per country.

As per materiality assessment performed the following physical risk drivers were assessed as higher potential hazard level for the Group and subsidiaries in the medium and long term:

- River flood (Serbia),
- Urban flood (Serbia),
- Wildfire (Serbia),
- River flood (Slovenia),
- Urban flood (Slovenia),
- Wildfire (Slovenia),
- Coastal flood (Slovenia),
- Landslide (Slovenia).

Different modalities of transition risk drivers, caused by changes in climate and environmental policies, technological progress or changes in market sentiment and preferences, are considered. Based on the performed analysis, expected changes in regulation and policies are considered as the most prominent transition risk drivers. Exposures to different industries are considered as a good indicator of the exposure to transition risks. Industries, with the highest share of CO₂ emission in the country, are considered as those highly exposed to transition risk. The following industries are those responsible for the highest share of CO₂ emission in the countries where the Group operates:

- C – Manufacturing
- H – Transportation and storage
- D – Electricity, gas, steam and air conditioning supply

Identification of transmission channels

C&E risks could affect the prudential risks the Group is exposed to through different transmission channels. Transmission channels are examined and assessed for each type of risk, split by climate transition risk, climate physical risk and environmental risk. C&E risks (transition and physical) are affecting Micro and Macro environment and further their impacts are reflected on the standard financial risks that the Group is exposed to:

INTERNAL

Table 32_ Schematic illustration of transmission from environmental risks to financial risks; Source: NGFS (2020b)

Gathering of the expert assessments

For the purpose of gathering expert opinions several workshops were held. Workshops were organized with representatives of all relevant organizational units in the Group and subsidiaries: representatives of the first line of defense (1LoD) – FO and UW, representatives of the second line of defense (2LoD) – risk management office, mainly from risk controlling and compliance department, representatives of the third line of defense (3LoD) – Internal audit, representatives of the finance department, representatives of the legal department, representatives of the Procurement department, representatives of the HR department and representatives of the marketing and communication department.

Workshops were separately organized for each subsidiary: AIK bank, Gorenjska bank, Eurobank Direktna bank as well as for the representatives of the Group.

Provided information are assessed for its relevance and finally included in the analysis.

Preparation of the portfolio analysis

Separate analysis is performed for each portfolio segment and country (where risk differentiators are recorded), entity and geographical distribution of the collaterals.

Analysis of the impact of C&E risk drivers on Credit risk is performed at the level of client segments and product types (for Retail portfolio).

Implementation of the qualitative and quantitative methods of analysis

For quantification of the impact of C&E risks on the Group's business and risk management framework, bottom-up stress test methodological set-up was used.

Number of different risk types are analyzed, grouped in aggregated risk categories (credit risk, market risk, interest rate risk, liquidity risk, operational risk, other stand-alone risks etc.). Analysis per risk type is considered as the main dimension of the analysis. Quantifications' results were incorporated in the process of calculations of KRIs/KPIs from RAS.

Quantitative analysis considered newly released scenarios and related shocks on key macro-indicators, behind each scenario (such inputs were used by ECB for the 2022 climate risk stress test). Quantitative analysis was extended to all NACE sectors in the portfolios of all Group's credit institutions.

Scenarios used in the exercise cover different observation periods. Scenarios cover a full spectrum of observation periods, from short-term up to long-term.

Based on the available scenarios in 2022 climate risk stress test, the Group has selected the following scenarios for quantification of the impact:

INTERNAL

- Long-term transition risks' scenarios
 - Orderly scenario (NGFS NetZero 2050)
 - Disorderly (NGFS Delayed transition scenario)
 - Hot-house world (NGFS Current policies scenario)
- Short term transition risks (NGFS Delayed transition scenario)
 - The short-term disorderly transition risk scenario
- Flood risk – It is a relevant scenario for estimation of the impact on REs

Calculations of the outcomes for different scenarios (impact on selected KPIs/KRIs that are part of the Group Risk Appetite Statement) are performed.

Interpretation of the results and conclusion on materiality assessment

Impact of the C&E risks is analyzed from the forward-looking perspective. Observation window for the analysis is divided into several periods:

- Short-term period (period up to 1 year)
- Mid-term period (period from 1 to 5 years)
- Long-term period (period over 5 years).

Uniform score scale (for measuring the impact) is used in the process of materiality assessment. Materiality scoring calibration is presented in the figure below:

C&E materiality scoring calibration:

Low: KRI is not expected to be impacted by C&E risks to a notable degree

Low-med: KRI is expected to be impacted by C&E risks to a small degree, which, however, doesn't impact the KRI's level significantly

Medium: KRI is expected to be impacted by C&E risks to a degree that its value exceeds **70% of the Limit** level, but stays within Limits

Med-High: KRI is expected to be impacted by C&E risks, and the KRI risk profile level is expected to come close to the **Limit** level

High: KRI is expected to be impacted by C&E risks, and the KRI risk profile level is expected to breach the **Limit** level

Figure 5_C&E materiality scoring calibration

If the final materiality score is marked as low or low-medium, regular monitoring activities are selected as follow up actions. For materiality scores marked as medium, close monitoring activities are initiated as follow up actions.

If final materiality score is marked as medium-high or high, impact of C&E risks on the Group operations and financial risks is considered to be material. For those areas where impact coming from C&E risks is assessed as material (regardless of the fact whether materiality is determined in short, mid or long-term observation period), follow-up actions are initiated.

Results and conclusion on materiality assessment

Table below shows the overview of the results per each risk type and KRIs.

INTERNAL

Table 33_ Materiality assessment of C&E risks results

RAS indicators	KRI materiality scoring						Impacted by		
	Score ST	Score MT	Score LT	Level ST	Level MT	Level LT	Climate physical	Climate transition	Environmental
	<1 yrs	<5 yrs	>5 yrs

Different risk types have been analyzed, grouped in aggregated risk categories (credit risk, market risk, interest rate risk, liquidity risk, operational risk, other stand-alone risks etc.). Analysis per risk type is considered as the main dimension of the analysis. Impact is separately analyzed for each KPI/KRI of each risk type. Impact of C&E risks are considered as material in cases of Credit risk and Capital risk (for specific KRIs).

Considering that the Group is significantly involved in legal entities finance business (covering Corporate portfolio, Public, Project finance, SME and MICRO segment), the biggest contributors to negative effects on additional impairments that influence negatively on Cost of risk and Capital ratios are the following:

- Corporate and Public Clients
- Coming from Serbia

INTERNAL

- Belonging to NACE codes: D - Electricity, gas, steam and air conditioning supply and B - Mining and quarrying

For Capital risk material impact is recorded due to the drop in capital ratios. The biggest drop in capital ratios is recorded in short-term disorderly scenario.

Material impact on Credit risk is recorded due to changes in CoR (Cost of Risk) and Share of Stage 2 loans in total gross exposure. Cost of risk in short-term disorderly scenario recorded significant change.

There are no other material impacts of C&E risk that are discovered during the materiality assessment.

15.4. Setting the KPIs within Group RAS

Based on the result of performed materiality assessment, Group's strategy and business plans are not expected to be impacted in short term. The Group set midterm targets for physical and transition risk in order to prevent impact on KRIs in mid and long term.

At the beginning of 2023, the Group updated Risk Appetite Statement by introducing short and medium-term risk indicators related to environmental and climate related risks.

Based on the identified physical risk drivers, the Group identified areas in Serbia and Slovenia in which those risks are higher and defined target for portion of collaterals in the regions with an indication of high physical risk by 2025.

In order to address the transitional risk, based on the relevant public data (government statistical institutions, European Commission statistical institutions), the Group identified industries with highest GHG emission for Serbia and Slovenia and set targeted exposure toward those industries.

In addition to targets related to physical and transitional risks, the Group also defined short term target for the portion of green financing in total loans by the end of 2024. The Group green loan definition is aligned with Green Loan Principles (GLP) published by Loan Market Association (LMA).

After performed calculations of financed GHG emissions based on the standard of the Partnership for Carbon Accounting Financials (PCAF), Group introduced new indicators (YoY change in total financed emission per NACE code and YoY change in total financed emission per asset class) in the scope of PCAF with the main goal to monitor the trend of change in total financed GHG emission and also defined targets have goal to set the direction of constant decrease of total financed GHG emission

Table 34_C&E risk key risk indicators set in Group Risk Appetite Statement

Risk Area	Key Risk Indicator	Description
Environmental and Climate related risk	Green financing	Total loans and advances exposure of all green loans issued in relation to Total loans and advances to customers
	Value of collaterals by regions, with an indication of highly exposed to physical risk	Value of collaterals by regions in relation to Loan Portfolio
	Exposures towards sectors with highest CO2 emission-Serbia	Exposure to NACE Letter C and D relation to Loans and Advances by end of 2025
	Exposures towards sectors with highest CO2 emission- Slovenia	Exposure to NACE Letter C, D and H relation to Loans and Advances by end of 2025
	Exposure to Electricity, gas, steam and air conditioning supply	Decrease the exposure to NACE code 35 in relation to Loan portfolio
	YoY change in total financed emission per D, B and C NACE code - Serbia	KRIs are based on the yearly comparison of financed GHG emission at the different levels of aggregation: NACE code or client level - Serbia
	YoY change in total financed emission per C, I and D NACE code - Slovenia	KRIs are based on the yearly comparison of financed GHG emission at the different levels of aggregation: NACE code or client level - Slovenia
	YoY change in total financed emission (per asset class in the scope of PCAF)	KRIs are based on the yearly comparison of financed GHG emission at the different levels of aggregation: asset class (as per PCAF methodology)

Results of the materiality assessment are used to shape follow-up actions and future strategic responses to better manage and/or mitigate impact of C&E risks.

15.5. Financed Scope 3 Greenhouse Gas (GHG) Emissions

Financed emissions are defined as indirect emissions attributed to financing activities – such as lending and investments – of financial institutions. These activities all contribute to providing capital or financing to a company that emits GHG emissions.

Therefore, the Group calculates its **financed GHG emissions** based on the standard of the Partnership for Carbon Accounting Financials (PCAF) performing sector level analysis for Scope 1, 2 and 3 GHG emission intensities and client/company level for GHG financed emissions.

Estimation of CO₂ financed emissions is performed in Q4 2023, including implementing the process to collect emission data from counterparties, attribution of the counterparty's GHG emissions in the proportion corresponding to the financing provided.

Asset classes based on PCAF	Financed GHG emissions	Financed emission intensity
	(t CO ₂)	(per mil EURO Revenue)
Listed equities and corporate bonds	10,639	192
Business loans and unlisted equities	2,868,166	3,911
Project finance	114,345	519
Commercial Real Estate	14,659	181
Mortgage	25,656	143
Motor vehicle loans	46,267	117
Sovereign	22	1,100
Other portfolios	269,006	1,195
TOTAL	3,348,760	7,358

The largest contributors to financed CO₂ emissions relates to the Asset class **Business loans and unlisted equities** where dominant segments are Corporate (incl. SME) and Public coming from Serbian market.

15.6. Incorporation of the C&E risks in risk management

The Group has taken necessary steps to incorporate C&E dimension into the credit analysis, risk assessment and decision phases by implementing several components into different phases of the credit lifecycle:

- The Group has introduced climate-related and environmental due diligence process of analysis for loans and borrowers associated with a higher C&E risk.
- questionnaires are defined for Serbian and Slovenian market that Group uses in the collection of ESG data.
- Sustainability flags to identify assets/investments that have been market as green, sustainable according to several criteria (EU Taxonomy flagging, green loans in line with LMA and ICMA, and in line with IFC) have been introduced.
- Identification of industries highly exposed to transition risks and non-compliance with minimum safeguards criteria became part of the exclusion list criteria
- C&E risks are introduced in collateral evaluation process so that each subsidiary should consider all available ESG factors affecting the value of collateral.

Incorporation of the C&E risks in the credit risk monitoring was done through defined C&E risk early warning signals (EWI) that are set at the level of portfolio and client level.

C&E risks are identified as material risk, and risk quantification for ICAAP purposes was done based on the results of performed stress testing for materiality assessment purposes, described above.

15.1. Green Asset Ratio (GAR) and Green financing

The EU Taxonomy regulation which presents a classification system that defines criteria for economic activities that are aligned with the EU's environmental goals, requires credit institutions to report on their GAR as a key performance indicator (KPI). The GAR shows the proportion of the credit institution's assets that are financed and invested in taxonomy-aligned economic sectors in relation to total covered assets, excluding exposures to central governments, central banks and supranational issuers.

INTERNAL

In order to fulfill the regulatory requirements relating to EBA Pillar III on ESG Risk and EU Taxonomy's Annex VI, Group initiated data collection strategy with an overview of the necessary data perimeter for calculation of the GAR.

The calculation of the portion of eligible / aligned exposures to Non-Financial Corporations subject to NFRD which constitute "general purpose" depends on the information about the % of eligibility and alignment of the Non-Financial counterparty to which the Group has the exposure. The calculation of the portion of eligible/aligned exposures to financial corporations is similar to the process described for Non-Financial Corporations, both for the general-purpose portion and for the specialized portion. The calculation of the portion of eligible/aligned exposures for loans on residential real estates or loans for the renovation of residential houses depends on the compliance of the immovable property with the technical screening criteria for buildings set out in Annex I, points 7.2, 7.3, 7.4, 7.5, 7.6 and 7.7, of the Delegated Regulation (EU) 2021/2139. The calculation of the portion of eligible/aligned exposures associated with consumer credit for the purchase of motor vehicles depends on the vehicle's compliance with the technical screening criteria for "Transport by motorbikes, passenger cars and light commercial vehicles" set out in Annex I, point 6.5, of the Delegated Regulation (EU) 2021/2139.

By the end of 2023, no taxonomy-eligible or taxonomy-compliant financing is identified and therefore **GAR ratio is set to 0% as of 31.12.2023**. There are several limiting factors related to GAR, and the most important relates to the fact that there is high non-EU share of business activities considering that largest part of the Group operates in Serbian market (64% of the Group's portfolio is coming from Serbia). This significantly restricts the Group of approaching companies that are subject to the NFRD.

The Group expects that data collection and analysis will continuously improved and will show results in the upcoming period. The Group will monitor all developments related to the EU Taxonomy Regulation and take them into account in its sustainability journey.

However, considering the Group's sustainability goals set by ESG Strategy and long-term resilience, there is a strong intention on increasing green lending. The Group is aware that green lending mitigates the risks associated with non-sustainable projects that might become stranded assets or face devaluation due to changing regulations or market conditions. Therefore, the following table provides an overview of on balance-sheet loans as of December 31, 2023 that are supporting the transition toward sustainable growth and a low-carbon economy, but are not covered by or not aligned to the EU Taxonomy and therefore not included in by the Green Asset Ratio calculation.

000 EUR		
Type of financial instrument	Type of counterparty	Loans and Advances / on-balance exposure
Loans (green, sustainable loans other than the EU taxonomy standards, based on LMA principles)	Non-Financial Corporation	38,514.62
	Leasing	8,564.10
	Retail	17,906.37
Total Group		64,985.09

Currently data on EPCs (or Energy passports in Serbia) are very limited. In AIK's portfolio no data on Energy passports are available.

Data in table above are populated on best effort basis, using mostly estimated EPCs based on collateral and external local data base.

Gorenjska bank made significant progress in terms of obtaining EPC data. Gorenjska bank also made an effort to develop internal model for estimation of the EPC grade/rating. Following the methodology for internal Arvio EE model, the proxy has been prepared by external provider with certification of model.

16. Remuneration Policy

(Article 450 a, b, c, d, e, f, g, l, i, j of the CRR Regulation)

This section discloses information, as required in Article 450 of Regulation (EU) No. 575/2013. The Remuneration Policy, including information regarding the criteria used for the measurement of performance and risk adjustment, is presented on a group level.

The Group has had a Group Remuneration Policy for the purpose of implementing sound remuneration practices which promote both achievement of the Group goals as well as prudent approach to risk management in place since 2018. In 2023 the Group Remuneration Policy was renewed, amended and assessed according to the risk appetite of the Group and in compliance with the regulatory requirements by respective management bodies. A central and independent review of the compliance with the regulation, other group policies, procedures and internal rules is performed by Group Internal Audit Function on a group level.

The management body on a group level assesses and approves Group Remuneration Policy. Similar approvals take place on a local level by the relevant management bodies in Subsidiaries. The management body, Remuneration and Risk Committee, work closely together and ensure that the remuneration policy is consistent with and promotes sound and effective risk management.

The management body in its management function on a group level ensures that the variable remuneration is (i) compatible with effective and wise risk management and does not encourage risk taking that surpasses the level that is acceptable for the Group, (ii) properly takes into account all types of risks, liquidity and capital levels, (iii) is consistent with and promotes sound and effective risk management, (iv) is in line with the business strategy, objectives, corporate culture and values and the long-term interest of the Group, (v) it performs annual performance assessment for the direct subordinates within the area of the responsibilities. Furthermore, it ensures that all variable remunerations are aligned with the overall results for the respective period and makes sure that they are in general adjusted to the achieved results, including by considering malus and claw-back arrangements.

The management body in its supervisory function on a group level is responsible for (i) adopting and maintaining the Group Remuneration Policy, (ii) overseeing its implementation, (iii) ensuring that the remuneration policies and practices are appropriately implemented and aligned with the overall corporate governance framework, corporate and risk culture, risk appetite and related governance processes (iv) ensuring the adequacy of the information provided to shareholders on remuneration policies and practices in particular on a higher maximum level of the ratio between fixed and variable remuneration. Furthermore, it determines and oversees the remuneration of the members of the management body in its management function.

The Remuneration Committee of management body in its supervisory function has access to all data and information concerning the decision-making process of the management body in its supervisory function on the remuneration policies and practices, design and implementation, oversight, and review and to all information and data from independent control functions, including risk management. The Remuneration Committee works closely together with the Risk Committee to ensure that the Remuneration Policy is consistent with and promotes sound and effective risk management.

Group HR & Organization function is responsible for the drawing up and the evaluation of the remuneration policy for the Group, including the remuneration structure, the aspect of gender neutrality, remuneration levels and incentive schemes, in a way that would not only attract and retain the staff the Group needs but also ensure that the remuneration policy is aligned with the institution's risk profile.

Group Risk and Group Compliance function work closely together with Group HR & Organization function to ensure appropriate implementation and alignment of Group Remuneration Policy with risk profile and culture, including risk-adjusted performance measures (ex-ante and ex-post adjustments), validating and assessing risk adjustment data and full compliance with respective legislation.

Within the Group, the competent functions on a group level and in Subsidiaries interact and exchange information as appropriate.

INTERNAL

The Group complies with the Group Remuneration Policy on an individual, sub-consolidated and consolidated basis, including its Subsidiaries not subject to Directive 2013/36/EU. Local policies follow to the maximum extent permitted under applicable local law the principles and rules set out in Group Remuneration Policy. Group Remuneration Policy provides a remuneration framework on a group level for all Subsidiaries and all staff members in order to achieve group wide consistency of the remuneration systems with the business and risk strategy of the Group. It forms an integral part of the Group governance practice and is developed in accordance with its operational model, business strategy, objectives, long-term interests and incorporates measures to avoid conflict of interest.

Group Remuneration Policy specifies all components of remuneration. It ensures that the payments made do not provide any incentive for excessive risk taking. It promotes sound and effective risk management and is consistent with the objectives of the Group business and risk strategy, corporate culture and values, risk culture, including environmental, social and governance risk factors, long term interests of the Group and the measures used to avoid conflict of interest and should not encourage excessive risk-taking on behalf of the Group or any of its Subsidiaries.

Group Remuneration Policy is a central element for the implementation of the remuneration systems within the Group. The objectives of the Policy are, among others, (i) to ensure that the remuneration across the Group is in line with the applicable regulations on remuneration; (ii) to set out the principles governing the Group remuneration systems and to build an overall framework on remuneration; (iii) to align the remuneration systems within the Group with the objectives set out in the business and risk strategy of the Group; (iv) to bring consistency, transparency, and equity to pay principles that will increase trust and staff's engagement; (v) to set out remuneration system that promotes motivation and achieving the best possible business results with appropriate risk management; (vi) to provide an environment that encourage innovation and extraordinary performance; (vii) to attract, retain, and motivate highly skilled individuals in a competitive international market; (viii) to provide an effective framework for performance measurement, risk adjustment and the linkages of performance to reward and (ix) to align the financial wellbeing of staff members with the economic interest of shareholder. The Group Remuneration Policy is transparent, known in advance, appropriately documented and internally published. At the end of 2023 the Group Remuneration Policy was renewed and amended to align Performance Management Framework and Short-Term Incentive Plan for identified staff members across the Group, with implementation across the Group following in 2024.

Remuneration policy for all staff is gender neutral and consistent with the principle of equal pay for male and female workers for equal work or work of equal value independent of their gender. The principle of gender equality of remuneration policies relates to all terms of employment and considers the underrepresented gender as well. The principle ensures equal opportunities and equal treatment of different genders with regard to the performance of professional activities in matters of employment and occupation. A gender-neutral remuneration policy is not limited to equal pay for equal work or work of equal value, as the principle is also considered in the development and implementation of staffing policies (recruitment, development and legacy, key staff, remuneration, promotion, training etc.), as this ensures gender neutral pay in the longer run.

With Group Remuneration Policy, the Group conforms to the general principles of balancing the ratio of fixed and variable remuneration, so that it limits variable remuneration in a manner that it cannot exceed 1 : 1 in ratio to fixed remuneration (whereby ratio between fixed and variable remuneration for control functions is significantly in favor of fixed remuneration).

The fixed component of the remuneration reflects staff's professional experience and organizational responsibility taking into account the level of education required to fulfill the position, the degree of seniority, the level of expertise and skills, the constraints (e.g., social, economic, cultural or other relevant factors) and job experience, the relevant business activity and remuneration level of the geographical location. The amount of fixed remuneration is sufficiently high in order to ensure that the reduction of the variable remuneration down to zero is possible. The Group conforms to the general principle that staff must not be dependent on the award of variable remuneration as this might otherwise create incentives for short-term-oriented excessive risk taking, including the mis-selling of products, where without such short-term risk taking the performance of the entity or staff would not allow for the award of variable remuneration. Yet the ratios between fixed and variable components of remuneration are balanced so that it still effectively encourages staff members to achieve or exceed planned results.

INTERNAL

The members of the management body in its supervisory function only receive fixed remuneration.

In addition to the fixed component of the remuneration, the staff may also be entitled to variable component of the remuneration – including short-term incentive and long-term incentive plans, in accordance with the provisions in their individual employment contracts, remuneration policy of the respective subsidiary and in line with local legislation, relevant regulation and Group Remuneration Policy. In principle, variable remuneration is determined on the basis of the performance assessment of achieving of the business performance of the respective subsidiary, as well as of the organizational unit and individual goals measured and assessed in accordance with internal acts of the respective subsidiary, conforming to five categories defined in Group Remuneration Policy (target met above 120% - extraordinary; target met between 111% and 120% - above expectations; target met between 101% and 110% - expected; target met between 95% and 100% - average; below 95% - poor). In general, the variable part of the remuneration has to reflect the sustainable and risk-based success that is higher than the average expected success, reflected in the fixed part of the remuneration. Generally, performance assessment is carried out once a year, or in different period of time if thus determined by respective subsidiary. The remuneration policy makes a clear distinction regarding the variable remuneration and the performance assessment between the operating business units, corporate and control functions. The staff who are performing control functions are independent from the organizational units they are monitoring and have appropriate authorizations and receive remunerations based on achieving objectives related to their functions, independently of the success of the business areas they are monitoring. Remuneration policy supports the Group and Subsidiaries within the Group in achieving and maintaining a target capital base. Variable remunerations are only paid or become payable if they are sustainable in terms of each group member's financial state and if they are justified by the success of the respective group member, the organizational unit, and the individual staff member.

Group Remuneration Policy defines that the group members include the impact of variable remuneration (both upfront and deferred amounts) in its capital and liquidity planning and in its overall internal capital and liquidity adequacy assessment process. Each group member within the Group ensures that the award, pay out and vesting of variable remuneration, including the application of malus and clawback arrangements, under their local remuneration policy is not detrimental to maintaining a sound capital and liquidity base in line with the risk appetite framework. The total variable remuneration awarded also considers the interests of shareholders and other stakeholders.

In line with Group Remuneration Policy, the management body and the Remuneration Committee (working closely together with Risk Committee) assess the achievement of performance targets and the need for ex post risk adjustment, including the application of malus and clawback arrangements. The management body and the Remuneration Committee have the competence to take into account any other matters that come to their attention in setting and deciding upon final adjustments to variable remuneration component (whether current or deferred) and activation of a clawback. Therefore, when considering risk adjustments to variable remuneration component, the management body and Remuneration Committee take into account also any intentional breaches of legislation, internal rules, authorizations or if staff member's actions, omissions or decisions have led to important losses for the subsidiary or Group, or they do not meet the suitability standards of the entity during their time on the job. These considerations apply to all staff members. The management body and Remuneration Committee have authority to reduce, withdraw and clawback variable remuneration components to zero or at least to the extent available in the respective local legislation.

If awarded variable remuneration component exceeds EUR 50.000 gross and represents more than one third of the respective identified staff's total annual remuneration, according to the Group Remuneration Policy, the total variable remuneration determined is paid in the following way:

- Of the first 60% of the amount, half is paid in cash after the Annual Report has been approved, whereas the second half is paid in instruments;
- The remaining 40% of the amount is deferred and paid on a "pro rata" basis, which means that of the remaining 40% of the amount, 20% of said amount is paid annually in the next 5 years (with half of that amount paid in cash and half in instruments). The last 20% of the amount is paid after 5 years.

INTERNAL

Severance payment is generally prescribed by the local legislation or defined in the collective agreement or subsidiary's collective agreement. Severance payment according to the Group Remuneration Policy cannot provide a disproportionate reward but provides appropriate compensation to the staff member in case of early termination of the contract. Severance payment does not reward failure or misconduct.

The Group effectively manages conflicts of interest by established system for the identification of conflicts of interest, which covers the criteria for identifying the circumstances that lead to or may lead to conflicts of interest as well as identification of conflicts of interests, and a system for the prevention of the occurrence of conflicts of interest including the determination of procedures and measures to manage the conflicts of interest. The Group takes organizational and other measures contained in its internal documents or implements guidelines to prevent or avoid conflicts of interest.

Remuneration Committee

Remuneration Committee on a group level is set up on a solo entity base. It is a committee of the management body in its supervisory function. The Remuneration Committee:

- Is responsible for the preparation of decisions on remuneration to be taken by the management body in its supervisory function, in particular regarding the remuneration of the members of the management body in its management function.
- Provides its support and advice to the management body in its supervisory function on the design of the remuneration policy, including that such remuneration policy is gender neutral and supports the equal treatment of staff of different genders.
- Supports the management body in its supervisory function in overseeing the remuneration policies, practices and processes and compliance with the remuneration policy.
- Checks whether the existing remuneration policy is still up to date and, if necessary, makes proposals for changes.
- Reviews the appointment of external remuneration consultants that the management body in its supervisory function may decide to engage for advice or support.
- Ensures the adequacy of the information provided to shareholders on remuneration policies and practices, in particular on a proposed higher maximum level of the ratio between fixed and variable remuneration.
- Assess the mechanisms and systems adopted to ensure that the remuneration system properly takes into account all types of risks, liquidity and capital levels and that the overall remuneration policy is consistent with and promotes sound and effective risk management and is in line with the business strategy, objectives, corporate culture and values, risk culture and long-term interest of the Group.
- Assess the achievement of performance targets and the need for ex post risk adjustment, including the application of malus and clawback arrangements.
- Reviews possible scenarios to test how the remuneration policies and practices react to external and internal events, and back-tests the criteria used for determining the award and the ex-ante risk adjustment based on the actual risk outcomes.
- Directly oversees the remuneration of the senior managers in the independent control functions.
- Ensures the proper involvement of the independent control function and other relevant functions (e.g., human resources) within the respective areas of expertise and, where necessary, seeks external advice.
- Collaborates with other Committees of the management body in its supervisory function whose activities may have an impact on the design and proper functioning of remuneration practices.

During the year 2023 the Remuneration Committee held 3 meetings and discussed the amendment and renewal of Group Remuneration Policy; performance bonuses for performance year 2022; remuneration of identified staff members and results of identification process of staff members whose professional activities have a material impact on risk profile on a group level for 2022 and 2023 (identified staff members).

The Remuneration Committee has 3 members (Chairman, Vice-Chairman and member of the Remuneration Committee). The management body in its supervisory function and the Remuneration Committee did not use any external consultants.

**Annual self-assessment (description of the staff or categories of staff whose professional activities have a material impact on institutions' risk profile)**

Annual self-assessment is conducted on individual, sub-consolidated and consolidated basis in order to identify all staff whose professional activities have or may have a material impact on the institution's risk profile on individual, sub-consolidated and consolidated level. The identification process is part of the overall remuneration policy. The annual self-assessment is based on the qualitative and quantitative criteria set out in Article 92(3) of Directive 2013/36/EU and Regulation (EU) 2021/923. The staff members that fall or are likely to fall under the Regulation (EU) 2021/923 are treated as staff whose professional activities have a material impact on the institution's risk profile for a period of at least three months in a financial year.

The annual self-assessment showed that, by considering criteria under the Directive 2013/36/EU and the Regulation (EU) 2021/923, the Group has identified all staff members whose professional activities have a material impact on the risk profile on individual and consolidated basis for year 2023. The self-assessment also shows that for year 2023 there was no exclusion of staff members in accordance with the regulation where the institution would deem that the quantitative criteria are not met by the staff member, as they in fact do not have a material impact on the institution's risk profile on individual or consolidated basis.

The self-assessment for year 2023 shows that there were 20 staff members (natural persons) in Agri Europe Cyprus Ltd., whose professional activities have a material impact on the institution's risk profile on individual basis and 100 natural persons identified as staff members whose professional activities have a material impact on the institution's risk profile on a consolidated basis during the year 2023. Institutions within the Group have identified staff members whose activities have a material impact on institution's risk profile on individual basis as follows:

- Agri Europe Cyprus Ltd.: 20 staff members,
- Nord Agri N.V.: 0 staff members,
- M&V Investments a.d.: 4 staff members,
- AIK banka a.d.: 42 staff members,
- Gorenjska banka d.d.: 37 staff members,
- GB Leasing d.o.o. has identified 9 staff members.

Taking into account Article 102 of EBA/GL/2021/04, stating that Institutions should ensure that staff members that fall or are likely to fall under Article 92(3), points (a), (b) and (c) of Directive 2013/36/EU or under the criteria of Article 5 of the RTS on identified staff for a period of at least three months in a financial year are treated as identified staff, there were no staff members identified from Eurobank Direktna a.d., for the period from November 2nd, 2023, till December 31st, 2023 on a consolidated level.

Aggregated number of all staff members identified on individual basis of each institution as stated in the previous paragraph, is not equal to the total number of natural persons identified as staff members whose professional activities have a material impact on the institution's risk profile on a consolidated basis. This is due to the fact that some staff members hold more than one position and are identified as a staff member whose professional activities have a material impact on the institution's risk profile on individual basis in more than one institution of the Group. To ensure full transparency, they are reported in REM tables according to their position where they carried out the predominant part of their business activities.

Each subsidiary discloses the payments to individual members of the Management Board in their Annual Report on solo level in accordance with the local regulation

17. Leverage

(Article 451 of the CRR Regulation)

The purpose of the leverage ratio is to limit the size of the Group balance sheet with a special emphasis on exposures not weighted as part of the existing calculations of capital requirements. The calculation of the leverage thus uses Tier 1 capital in the numerator, while in the denominator it uses the leverage exposure, including balance and off-balance-sheet items after performed adjustments, as part of which exposures from derivatives, exposures from securities financing transactions and other off-balance-sheet items are especially emphasised.

In accordance with Article 499(2) of the CRR, the Group decided to disclose the leverage ratio where the capital measure is Tier 1 capital.

As at 31 December 2023, the Group's leverage ratio is calculated according to guidelines of the Commission Delegated Regulation (EU) 2015/62 and is well above regulatory prescribed minimum of 3%.

To fulfil the obligations regarding the disclosure of information about the leverage, the Group used templates from the implementing regulation for the disclosure of the leverage ratio.

The Group regularly assesses the adequacy of the level of the leverage ratio indicator, simultaneously with the assessment of the level of the capital adequacy indicator and other indicators of adequate level of capital, at least on quarterly level. Beside regulatory required calculation and reporting, leverage ratio is regularly monitored in Group Risk Report by management and supervisory BOD and Risk Committee, at least on quarterly level. The Group uses the leverage indicator in a set of indicators for systemic warnings as part of the Group's recovery plan made according to the provisions of Directive 2014/59/EU of the European Parliament, which also defines limit values of the level for activating mechanisms.

Table EU_LR1 provides reconciliation of AEC Group financial statements to the leverage ratio exposure as of 31.12.2023:

Factors influencing the development of leverage

Leverage ratio reaches constantly high levels in 2022 and in 2023, well above regulatory (3%) and internally defined thresholds.

Impacts on change of leverage ratio in 31.12.2023 compared to 31.12.2022 are as follows:

- Tier 1 capital increased by 291.0 million EUR, and the main drivers are:
 - Increase of paid up capital, +40 mEUR,
 - Increase of retained earnings, +266 million EUR,

INTERNAL

- Increase of Accumulated other comprehensive income, +16 million EUR,
 - Increase of other intangible assets, as deductible item, -20 million EUR,
 - Decrease of deductible item Deferred tax assets, +2 mEUR,
 - Non-application of transitional adjustment to CET1, -10 mEUR,
 - CET1 deductible item, -4 mEUR.
- Risk position value increases by 3,048 million EUR, as a result of bank acquisition during 2023 (Eurobank Direktna acquisition by AIK bank in November 2023) and business increase.

18. Liquidity Requirements

(Article 451a g, Article 435.1 of the CRR Regulation)

18.1. Liquidity risk management

Liquidity risk management within the Group is prescribed in Group Framework on Liquidity Risk Management and Liquidity Stress Testing. This document sets out the basic principles and rules regarding liquidity risk management and liquidity stress testing process among members of a banking group where Agri Europe Cyprus Limited is a ultimate finance holding company.

Liquidity risk is organized in a way that responsibilities and roles are divided among different business and organizational units. Overall responsibility for liquidity risk management lies with AEC BoD (Supervisory and Management Function), in charge for adopting decisions concerning liquidity risk management and provides guidelines, defines structural and income criteria in order to ensure an adequate volume of liquid investments, sets up the basic criteria for the structure of liquidity and funding sources, approves and revises relevant documents from liquidity risk area on Group and solo level, as well as approves Liquidity Contingency Plan. The liquidity management functions are organized in alignment with the three lines of defence. First line of defence are business units, ALM and Treasury, responsible for compliance with risk appetite limits, monitoring market developments, counterbalancing capacity management, future cash flow projections and liquidity contingency plan. Second line of defence are Risk management and Compliance Unit. Risk management unit is in charge of development of risk management framework, setting limits and strategies, validation of activities conducted by business units. Compliance is in charge for reviewing and monitoring regulatory changes with which the Group is required to comply and checking the compliance with the regulatory expectations. Internal Audit presents third line of defence in liquidity risk management process. Responsibilities of Internal Audit are to monitor effectiveness of the Group's internal quality control and risk management system, general risk assessment of all aspects and creating of internal audit work plan, including open issues and areas with high risk identified in previous risk assessments/addressing shortcomings.

Liquidity risk management process on solo level (i.e. credit institution subsidiary) is an integral part of the Group risk management system and it is harmonized with the Group's Risk Management Strategy, regulatory requirements, international standards and best practices, while respecting the specifics of business activities and strategic goals. Subsidiaries are obliged to align with the Group process, but also with any regulatory requirements on local level, considering its size, nature, complexity and impact on risk exposure on the Group level. Group is conducting the Internal Liquidity Adequacy process, since it is key input to strategy and overall balance sheet management. ILAAP is an integral part of the bank's management process and decision-making culture which is achieved by capturing output from ILAAP process in the setting of risk limits, counterbalancing capacity and recovery options. Key ILAAP inputs are a business strategy, risk identification, risk appetite, capital and financial plans. Business strategy is formed through a formal and rational decision-making process. The key stage of the process is an identification of material risks, including selection of key risk drivers in order to create a limit system. Limits have been articulated through the establishment of the Risk Appetite, where it is clearly defined to what extent the Group is willing to take risks (with regards to size, form and content of the balance sheet) and be able to continue operating by maintaining adequate counterbalancing capacity and stable funding by managing its risks effectively. Business strategy and risk appetite limits form basis for financial and capital plans which are prepared for the 3-year period. The key part of financial planning is to keep portfolio risks within limits.

INTERNAL

The basic method of liquidity measurement involves estimating and comparing future cash inflows and outflows based on balance sheet and off-balance sheet items at different time intervals, with the aim of identifying potential shortfalls of liquid assets, both in the conditions of regular operations and in the conditions of stress events or liquidity crisis. The first stage for the risk identification is the recognition of all the material current risks the Group is exposed to, and the future risks the Group could be exposed to.

Each credit institution subsidiary monitors indicators and limits defined in the Group RAS and reports to the Group Risk Controlling and Monitoring Unit on those indicators. Group Risk Controlling and Monitoring Unit calculates all liquidity risk indicators on Group level.

Policies for mitigating the liquidity risk is prescribed in Group Framework on Liquidity Risk Management and Liquidity Stress Testing and in line with Group Policy on Risk Management. Group Framework on Liquidity Contingency Plan prescribes obligation of each credit institution subsidiary to adopt LCP (liquidity contingency plan) on a solo level which sets out the measures for addressing liquidity difficulties under stressed circumstances. The LCP is expected to address the risks identified in the Group's ILAAP and to set out the relationship with Group Recovery plan through stress testing, liquidity risk indicators and recovery options. The LCP is triggered in the event of stress and measures are taken to improve the liquidity situation in accordance with the appropriate level of shock, while the Recovery Plan is triggered only in extreme situations where the Group's business is significantly threatened. The Critical Liquidity Situation defined by the LCP framework is differentiated in two levels - Liquidity Warning Situation (LWS) and Liquidity Emergency Situation (LES). LCP is activated when an indicator reaches amber warning level (corresponds to LES) - whereas Recovery Plan is activated when an indicator reaches red warning level. LWS requires steps to be taken according to the LCP action plan. Warning levels can be set more conservative on subsidiary level if the analysis shows that more conservative limits would be appropriate. The LCPs on a solo level of each credit institution subsidiary are necessary tool for Group liquidity risk management and therefore they should reflect individual organisational structures and cross-border activities of each entity taking into consideration possible limitations and barriers on assistance provided by the other entities, members of the Group, in times of crisis.

Group liquidity stress testing is used for identification of liquidity risk, measuring and evaluating of liquidity position. It is not only a regulatory compliance exercise, a standalone process, but liquidity stress testing is integrated into the whole business activities, including strategic planning. Liquidity stress testing is actionable, with the results from stress testing analyses impacting decision making at the appropriate management level, including strategic business decisions of the board and senior management. Stress testing provides information about how the business model performs under stressed conditions. In case of pure performance under stress, a rework of the business model and related strategic plan and budget may be required. Importantly, stress tests should feed into the liquidity planning process.

On solo entity level, subsidiaries conduct stress tests on a monthly basis in order to identify and measure exposure to liquidity risk in extraordinary circumstances, analyzing possible effects on cash flows and liquidity. Group Risk Controlling and Monitoring Unit has the responsibility and authority for the design, planning and implementation of liquidity stress tests.

The Bank's resilience to a liquidity shock is measured using the maturity ladder metric (EBA ITS COREP C66 template) that supports calculation of net liquidity position for every daily bucket. The focus is on bank's ability to handle hypothetical idiosyncratic liquidity shocks (adverse, extreme) in which bank face increasing liquidity outflows. Half-life stress functions was applied in distributing deposits, assuming that more deposits will be withdrawn in short term buckets and outflow curve will be sharper than in linear or compounding stress function. Methodology of liquidity stress test model is assuming different days of deposit outflows per each different scenario and per different customer segment. Liquidity stress test is done in Total (for all currencies), and separately for each significant single currency on credit institution subsidiary and Group level.

The Group developed 3 forward-looking adverse scenarios (idiosyncratic, market-wide and combined), which consider bank's material vulnerabilities, the business model and risk profile, as well as the external conditions. All scenarios have different intensity of stress effects. In particular, the scenarios assume negative deviations from the business plan in terms of higher outflows and lower inflows: withdrawal or no longer prolongation of big deposits, reduced inflow from big tickets due to prolongation or default of the loan because of reduced performance, reputational issues in subsidiaries resulting in an

INTERNAL

unexpected outflow of retail savings accounts, negative deviation from planned increase in deposits from legal entities due to either reputational issues or consequently a further deterioration in the geopolitical situation.

Survival horizon is liquidity risk indicator, resulting from liquidity stress test, under combined-adverse scenario. It is defined as a period during which the bank will be able to meet its obligations without necessity to generate additional funds in a stress scenario, taking into account the counterbalancing available at the moment of calculation. Survival horizon serves as a limit over stress scenario and is one of the indicators of economic perspective and included in RAS with the buffers above specified regulatory requirement, i.e. 45 days for threshold on the Group level.

One more perspective of monitoring liquidity risk is intraday. In intraday liquidity management the liquidity risk-bearing capacity is operationalized based on minimum level of available intraday liquidity at the beginning of each working day per each credit institution subsidiary. Methodology of estimating the minimum balance for Intraday liquidity management is prescribed in detailed in Group Procedure on Intraday Liquidity Management, according to the BCBS Monitoring tools for intraday liquidity management. Daily monitoring of the intraday liquidity position is performed on continuous basis and reported about on the beginning of each working day. In case of uncertain circumstances monitoring is performed more frequently.

18.2. Qualitative information on LCR

Liquidity coverage ratio (LCR) was introduced by Basel Committee on Banking Supervision set standards. It entered into the force with the Directive CRD IV and the CRR Regulation, in 2015. LCR is designed to ensure that banks have an adequate level of freely available high-quality liquid assets, which can be converted into cash very quickly and without significant costs, to fulfil its liabilities for the following 30-day period under stringent, stressed situation on financial markets.

LCR as of December 31, 2023, calculated according to Article 451a(2) CRR, was 369.5%, which is significantly higher than regulatory prescribed minimum of 100%. Movements in LCR during 2023 were mostly triggered by movements in the level of HQLA and amount of reverse repo transactions with central bank at AIK Bank side.

Since tolerance for liquidity risk is low, this results in the long-term goal of providing a sufficient, stable and diverse funding base and compliance with relevant regulatory frameworks. According to the business model, the most of the funds are in form of non-banking sector deposits. Non-banking sector deposits provide a stable source of funding and limit reliance on the wholesale funding markets. The majority of those deposits are in form of sight deposits that have no remaining maturity. Funding is monitored on monthly basis through „Concentration of funding by counterparty” indicator. It allows the identification of those sources of wholesale and retail funding of such significance that their withdrawal could trigger liquidity problems (share of top 10 largest deponents in total NBS deposits). Concentration of funding by counterparty is part of additional liquidity monitoring metrics under the CRR EBA. This way regulator can obtain a comprehensive view of bank's liquidity risk profile, proportionate to the nature, scale and complexity of its activities.

Liquidity buffer is composed of cash, central bank balance (excluding obligatory reserve) and internally defined unencumbered high quality liquid assets which can be liquidated via repo or sale without significant value loss. Other unencumbered high liquid assets are other unencumbered securities and unencumbered ECB eligible credit claims maturing beyond 1 month. There must be no legal, regulatory or operational impediments to using these assets. On Group level, high quality liquid asset (HQLA) as of December, 2023, in amount of 1,153,020 thousand EUR was held in Level 1 cash and central bank reserves and level 1 high quality securities.

There were no such exposures towards derivatives transactions with significant impact on LCR and there weren't any collateral calls on this matter.

On Group level, LCR is calculated for EUR and RSD, recognized as significant currencies, 5% of total group liabilities excluding regulatory capital and off balance sheet liabilities. According to risk appetite statement there is prescribed limit for LCR for all currencies (sum of all currencies). Table presented below presents the values and figures for each of the four calendar quarters (January-March, April-June, July-

September, October-December) of 2023. Those values and figures as the simple averages of month-end observations over the twelve months preceding the end of each quarter.

18.3. Quantative information on LCR

33	Total RSF					2,965,699
34	Net Stable Funding Ratio (%)					149.6%

Net stable funding ratio (NSFR) shall be equal to the ratio of the institution's available stable funding to the required stable funding according to CRR2. The objective of this ratio is to provide greater control over (mis)matched maturities, covering on and off-balance sheet items over medium and long-term period.

19. Use of Credit Risk Mitigation Techniques

(Article 453 b, c, d, e, f, g, h and i of the CRR Regulation)

19.1. Policies and Processes for Collateral Valuation and Management

Credit risk mitigation involves the establishment of measures and rules for the application of these measures, relating to the acquisition, reduction, diversification, transfer and avoidance of risks. Collateral management is covered by internal act Group Policy on Collateral Management which sets out the overall principles of collateral management for the credit institution subsidiaries, defines the credit risk mitigation instruments acceptable on the Group level, as well as the process of valuation, monitoring and reporting. The collateral management process at the level of each subsidiary is an integral part of the Group Collateral Management System and it is harmonized with the Group's Policy on Collateral Management, regulatory requirements, international standards and best practices, while respecting the specifics of business activities and strategic goals. In order to maintain risk at an acceptable level, each subsidiary applies credit risk mitigation techniques at the level of individual placements by respecting internally set limits, diversifying placements / investments and acquiring acceptable security instruments (collaterals).

Mitigation of concentration risk is carried out by active management of the Loan portfolio, as well as by adjusting the level of exposure with the defined internal limits.

For every collateral valuation criteria are defined for determination of internal value of collateral. Internal collateral value is calculated in such a way that a haircut is applied on the market value, whereby the amount of the haircut depends on the type of collateral. Considering that subsidiaries operate on different markets, each subsidiary defines haircuts per type of the collateral. In case of immovable properties, those haircuts should take into account location of the collateral if possible depending on available data. Applied haircuts are reviewed annually or more often in case of significant changes on the market.

Subsidiaries analytically monitor collateral held - in accordance with the statutory requirements monitors and reports on collateral according to market value. For managing, monitoring and appraising of real estate collateral, each bank subsidiary has implemented an application of the collateral module, developed by an external institution. Each subsidiary has adopted list of official appraisals and appraisal companies.

The real estate valuation must be carried out in accordance with applicable international, European and national (of each subsidiary) standards, such as the International Valuation Standards Council (IVSC), the European Group of Valuers' Associations (TEGoVA), European Valuation Standards (EVS) and the Royal Institution of Chartered Surveyors standards (RICS). Exception are made in case of valuations for NPE in bankruptcy proceeding, in the execution process of collateral and in case of collaterals that are subject of financing in leasing products.

The valuation should be based on the Market value method and appraisers should apply this method wherever possible or acceptable, as it provides the most direct link to actual market transactions analysed to obtain real estate values. In the case of estimating the value of real estate that generates income, the Income approach can be used. Cost Method should be used only in the case of rarely valued real estate valuation, and lack of activity in that part of the market prevents the use of the Market Method. Group accepts real estate valuations based on the Residual method, but it is important that the valuation itself in these cases contains a satisfactory level of information and documentation on the basis of which the real estate value is calculated.

Subsidiaries ensure regular monitoring of the value and collateral legal certainty at appropriate intervals, depending on the type of collateral.

Regular monitoring of real estate value means checking that the value is based on available data and information, including the use of statistical models. Subsidiary must perform this check at least once a year for commercial real estate, or at least once every three years for residential and other real estate.

INTERNAL

The value of collateral is monitored more frequently in the event of significant changes in market conditions relevant to collateral and reviewed whenever there is available information indicating significant decline in the value of collateral.

19.2. Main Types of Collateral Taken by the Group

In accordance to Capital Regulatory Requirements (CRR) following types of collaterals are recognized as credit risk mitigation instruments:

- Instruments of Funded Credit Protection,
- Instruments of Unfunded Credit Protection.

For each collateral type is defined whether it is eligible to be treated as mitigation factor or not. Collaterals must fulfill legal and regulatory requirements in order to be accepted as mitigant factor.

On and off balance sheet netting is not in use in AEC Group.

Instruments of Funded Credit Protection

Funded credit protection means a technique of credit risk mitigation where the reduction of credit risk on the exposure of the subsidiary derives from the right of that subsidiary, in the event of the default of the counterparty or on the occurrence of other specified credit events relating to the counterparty, to perform one of the following:

- to liquidate,
- to obtain transfer or appropriation of,
- to retain certain assets or amounts,
- to reduce the amount of the exposure or to replace it with the amount of the difference between the amount of the exposure and the amount of a claim on the subsidiary.

Instruments of Unfunded Credit Protection

Unfunded credit protection means a technique of credit risk mitigation where the reduction of the credit risk on the exposure of the subsidiary derives from the obligation of a third party to pay an amount in the event of the default of the borrower or the occurrence of other specified credit events.

Below are presented, in general, Instruments of Funded and Unfunded Credit Protection:

Funded Credit Protection	Unfunded Credit Protection
Immovable properties	Guarantees
Movables	Securities
Cash Assets	Insurance
Rights and Receivables	

In the process of establishing the offered collateral, regardless of the type of collateral, subsidiary, client or third party related to the collateral is obliged to comply with all local legal regulations that define the management, disposal and contracting of collateral.

Collateral may be eligible for evaluation in the credit decision-making process if all necessary legal conditions for establishing collateral are met and if the collateral has legal effect and is enforceable under applicable state regulations in the event of bankruptcy of the borrower or collateral owner.

19.3. Main Types of Guarantor and Credit Derivative Counterparty and their Creditworthiness

Guarantees or unfunded credit protection is a type of credit risk mitigation where a third person undertakes to pay the owed amount in the event of a default by primary obligor (borrower).

The most important types of suitable guarantors:

- guarantees by the central government;
- guarantees by institutions.

The central government units that the Group considers as guarantors when recognising unfunded credit protections to calculate the capital requirement for credit risk are EU Member State units (and non-EU countries which regulations are aligned with EU regulations) denominated and financed in their domestic currencies, so exposures are assigned a 0% risk weight (in accordance with the CRR regulation).

Institutions that the Group takes into account as guarantors when recognising unfunded credit protections to calculate the capital requirement for credit risk have no credit assessment of a suitable ECAI, but exposures are assigned a weight of 20% due to the country where the institutions are located (in accordance with the CRR regulation). Distribution of type of guarantors are given in the table below.

Table 49_Distribution of type of guarantors

000 EUR

Type of guarantors	Performing exposure	Non-performing exposure
Governments	65,706	4,913
Banks	16,237	560
Other	29,080	14,652
Total	111,022	20,125

More than 90% of total amount of guarantees refers to government guarantees.

The Group has no transactions with credit derivatives.

19.4. Information about Market or Credit Risk Concentrations within the Credit Mitigation Taken

Group avoid concentration risk related to collaterals by diversifying its portfolio per volume, clients segment, geographic region, etc.

In the event of collateral in the form of securities, Group is faced with market risk, or more accurately, the risk of the security prices changing on the capital market. In the event of collateral in the form of guarantees, there is a credit risk of the collateral provider, therefore Group includes the amount of the surety received in the guarantor's upper limit of borrowing.

When approving placement, the counterparty risk in transaction and the assessment of the client's free financial flow are of primary importance, collateral is only a secondary source for paying the obligations. To avoid the effect of risks that are the result of individual forms of collateral, subsidiaries define minimum ratios between the value of collateral and the loan (LTV).

As part of the Group lending operation, each subsidiary assesses the repayment potential of placements from the borrower's sustainable cash flow and the primary source of repayment is expected to be future cash flow. The collateral is exclusively a mechanism of credit protection established in order to protect the Group from irregular payments from borrower and reduce losses in the event of material deterioration of the risk profile or default of the borrower. In the event that the collection of receivables from pledged collateral is necessary, the subsidiary should choose the most effective collection method, based on analysis of the specific case.

Special attention must be given to collateralization of existing loans during a period of borrower's financial crisis. Collaterals established during such a period must be defensible and enforceable according to the respective local legal provisions in the event of subsequent insolvency.

In order to form individual impairments, Group considers the liquidation values of real estate collaterals, which include both the assessed sale timeline as well as additional discounts for the process of a forced sale and incurred costs. Because the assessed liquidation values stem from market values, a significant reduction of the market value would see Group form additional impairments.

INTERNAL

As eligible collateral for calculating the capital requirement for credit risk, Group uses the following financial collaterals:

- bank deposits at the a member bank or cash-like instruments the member bank holds (it takes into account deposits maturity of which equals or exceeds the maturity of the credit exposure);
- debt securities issued by central government or central banks (that have a credit assessment from a suitable ECAI with a credit quality step of at least 4),
- debt securities issued by institutions (that have a credit assessment from a suitable ECAI with a credit quality step of at least 3),
- debt securities issued by other entities (that have a credit assessment from a suitable ECAI with a credit quality step of at least 3),
- debt securities issued with a short-term credit assessment from a suitable ECAI (with a credit quality step of at least 3),
- equities or main index convertible bonds,
- gold.

Overview of usage of credit risk mitigation techniques is given in the table EU_CR3, presented below:

Table 50_EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques

000 EUR

		Unsecured carrying amount	Secured carrying amount			
				Of which secured by collateral	Of which secured by financial guarantees	Of which secured by credit derivatives

3	Total	6,241,276	2,060,564	1,786,846	273,719	30,659
4	Of which non-performing exposures	61,806	56,029	54,171	1,858	-
EU-5	Of which defaulted	61,806	56,029	54,171	1,858	-

There are no significant changes.

The table EU CR4 which shows effects of credit risk mitigation techniques that AEC Group uses (overview of credit risk exposure and CRM effects: EU CR4 – standardised approach – Credit risk exposure and CRM effects) is given in the point 10.2 of this Disclosure Report.

20. Appendix 1 - Disclosure of non- performing and forborne exposures

In line with EBA Guideline on disclosure on non-performing and forborne exposures (EBA/GL/2018/10), AEC Group disclosure tables showing volumes and levels of NPEs, FBEs and foreclosed assets in its balance sheet, with the aim of fostering transparency, providing meaningful information to market participants on the quality of assets. Templates applicable to AEC Group are Templates 1, 3, 4 and 9, since its NPL ratio is below 5%, and no additional information is required.

21. Appendix 2 – Overview of Regulatory required information

AEC Group in this Appendix specifies regulatory required information in line with EBA CRR and following amendments, accompanied with name of uniform tables that have to be used for disclosure of quantitative and qualitative data for certain parts of Disclosure Report.

In the Appendix AEC Group also specifies disclosures that are not applicable for the Group, with reasoning.

Point in CRR/ Name of the table	Point in Disclosure Report	Required information
431-434	1	Introduction: Regulations regarding Pillar 3, obligation of the Group to disclose information, general info
435.1	2	Risk Management Objectives and Policies:
EU_OVA EU_CRA EU_MRA EU_LIQA EU_ORA		For each separate category of risk:
		a) strategies and processes to manage those risks EU_OVA, EU_LIQA, EU_CRA, EU_MRA, EU_ORA
		b) structure and organisation of the suitable risk management function, including information on its hierarchy and status, or other suitable arrangements EU_OVA, EU_LIQA, EU_CRA, EU_MRA, EU_ORA
		c) the scope and nature of risk reporting and measurement systems EU_OVA, EU_LIQA, EU_MRA
		d) the policies for hedging and mitigating risk, and the strategies and processes for monitoring the continuing effectiveness of hedges and mitigants EU_LIQA, EU_CRA, EU_MRA, EU_ORA
		e) a declaration approved by the management body on the adequacy of risk management arrangements EU_OVA, EU_LIQA, EU_ORA
		f) a concise risk statement approved by the management body succinctly describing the relevant institution's overall risk profile: (i) key ratios and figures providing external stakeholders a comprehensive view of the institution's management of risk (ii) information on intragroup transactions and transactions with related parties that may have a material impact of the risk profile of the consolidated group EU_OVA, EU_LIQA, EU_CRA, EU_ORA
435.2	3	Governance Arrangement:
EU_OVB		a) the number of directorships held by members of the management body EU_OVB
		b) the recruitment policy for the selection of members of the management body and their actual knowledge, skills and expertise EU_OVB
		c) the policy on diversity with regard to selection of members of the management body, its objectives and any relevant targets set out in that policy, and the extent to which these objectives and targets have been achieved EU_OVB
		d) setting up a separate risk committee and the number of times the risk committee has met EU_OVB
		e) the description of the information flow on risk to the management body EU_OVB
436	4	Scope of Application:
EU_LI1 EU_LI2 EU_LI3 EU_LIA EU_LIB EU_PV1		a) the name of the bank to which the requirements of the regulation apply
		b) a reconciliation between the consolidated financial statements prepared in accordance with the applicable accounting framework and the consolidated financial statements prepared in accordance with the requirements on regulatory consolidation pursuant to Sections 2 and 3 of Title II of Part One of CRR EU_LI3, EU_LIA
		c) breakdown of assets and liabilities of the consolidated financial statements prepared in accordance with the requirements on regulatory consolidation pursuant to Sections 2 and 3 of Title II of Part One, broken down by type of risks

INTERNAL

		EU_LI1 d) reconciliation identifying the main sources of differences between the carrying value amounts in the financial statements under the regulatory scope of consolidation as defined in Sections 2 and 3 of Title II of Part One, and the exposure amount used for regulatory purposes EU_LI2, EU_LIA e) or exposures from the trading book and the non-trading book that are adjusted in accordance with Article 34 and Article 105, a breakdown of the amounts of the constituent elements of an institution's prudent valuation adjustment, by type of risks, and the total of constituent elements separately for the trading book and non-trading book positions EU_PV1 Not applicable, AEC Group does not apply core approach for determination of additional valuation adjustment. f) any current or foreseen material practical or legal impediment to the prompt transfer of own funds or repayment of liabilities among the parent undertaking and its subsidiaries EU_LIB g) the aggregate amount by which the actual own funds are less than required in all subsidiaries not included in the consolidation, and the name or names of such subsidiaries EU_LIB h) the circumstances under which use is made of the derogation referred to in Article 7 or the individual consolidation method laid down in Article 9, where applicable EU_LIB
437	5	Own Funds:
EU_CC1 EU_CC2 EU_CCA		a) a full reconciliation of own funds items and filters and deductions applied to own funds and the balance sheet EU_CC1, EU_CC2 b) a description of the main features of the instruments of individual categories of own funds issued by the bank EU_CCA c) the full terms and conditions of all instruments of individual categories of own funds EU_CCA d) separate disclosure of the nature and amounts of prudential filters and deductions from own funds EU_CC1 e) a description of all restrictions applied to the calculation of own funds in accordance with the regulation and the instruments, prudential filters, and deductions to which those restrictions apply EU_CC1 f) bases on which capital ratios are calculated (if made on a basis other than that laid down in the CRR) EU_CC1 Not applicable, AEC Group calculates capital ratios based on CRR
437a	-	Own funds and eligible liabilities
		1. Subject to Articles 93 and 94 and to the exceptions set out in paragraph 2 of this Article, institutions identified as resolution entities and that are a G-SII or part of a G-SII shall at all times satisfy requirements for own funds and eligible liabilities set in this point Not applicable, AEC Group is not G-SII or part of G-SII
438	6	Own Funds Requirements and risk-weighted exposure:
EU_OV1 EU_KM1 EU_INS1 EU_INS2 EU_OVC EU_CR8 EU_CR10 EU_CCR7 EU_MR2-B		a) a summary of the approach to assessing the adequacy of its internal capital to support current and future activities EU_OVC b) amount of the additional Own Funds requirements based on the supervisory review process EU_KM1 c) upon demand from the relevant competent authority, the result of the institution's internal capital adequacy assessment process EU_OVC Not included, there is no demand from competent authority d) total risk-weighted exposure amount and the corresponding total own funds requirement determined in accordance with Article 92, to be broken down by the different risk categories set out in Part Three EU_OV1 e) on- and off-balance-sheet exposures, the risk-weighted exposure amounts and associated expected losses for each category of specialised lending referred to in Table 1 of Article 153(5) and the on- and off-balance-sheet exposures and risk-weighted exposure amounts for the categories of equity exposures set out in Article 155(2) EU_CR10

		Not applicable, AEC Group does not use simple riskweighted approach f) exposure value and the risk-weighted exposure amount of own funds instruments held in any insurance undertaking, reinsurance undertaking or insurance holding company that the institutions do not deduct from their own funds in accordance with Article 49 EU_CR8, EU INS1 Not applicable, AEC Group does not hold insurance or re-insurance undertakings or insurance holding company. g) supplementary own funds requirement and the capital adequacy ratio of the financial conglomerate calculated in accordance with Article 6 of Directive 2002/87/EC and Annex I to that Directive where method 1 or 2 set out in that Annex is applied EU INS 2 Not applicable, AEC Group is not part of financial conglomerate h) variations in the risk-weighted exposure amounts of the current disclosure period compared to the immediately preceding disclosure period that result from the use of internal models, including an outline of the key drivers explaining those variation EU_CCR7, EU_MR2-B Not applicable, AEC Group does not apply IRB approach, IMM or IMA
439	7	Exposure to Counterparty Credit Risk (CCR)
EU_CCRA EU_CCR1 EU_CCR2 EU_CCR3 EU_CCR4 EU_CCR5 EU_CCR6 EU_CCR8		a) description of the methodology used to assign internal capital and credit limits for counterparty credit exposures, including the methods to assign those limits to exposures to central counterparties EU_CCRA b) description of policies related to guarantees and other credit risk mitigants, such as the policies for securing collateral and establishing credit reserves EU_CCRA c) description of policies with respect to General Wrong-Way risk and Specific Wrong-Way risk as defined in Article 291 EU_CCRA Not applicable, AEC Group does not define/use General Wrong-Way risk and Specific Wrong-Way risk d) amount of collateral the institution would have to provide if its credit rating was downgraded EU_CCRA e) amount of segregated and unsegregated collateral received and posted per type of collateral, further broken down between collateral used for derivatives and securities financing transactions EU_CCR5 f) for derivative transactions, the exposure values before and after the effect of the credit risk mitigation as determined under the methods set out in Sections 3 to 6 of Chapter 6 of Title II of Part Three, whichever method is applicable, and the associated risk exposure amounts broken down by applicable method EU_CCR1 g) for securities financing transactions, the exposure values before and after the effect of the credit risk mitigation as determined under the methods set out in Chapters 4 and 6 of Title II of Part Three, whichever method is used, and the associated risk exposure amounts broken down by applicable method EU_CCR1 h) exposure values after credit risk mitigation effects and the associated risk exposures for credit valuation adjustment capital charge, separately for each method as set out in Title VI of Part Three EU_CCR2 i) exposure value to central counterparties and the associated risk exposures within the scope of Section 9 of Chapter 6 of Title II of Part Three, separately for qualifying and non-qualifying central counterparties, and broken down by types of exposures EU_CCR8 Not applicable, AEC Group does not have any exposure value to central counterparties at reference date j) notional amounts and fair value of credit derivative transactions; credit derivative transactions shall be broken down by product type; within each product type, credit derivative transactions shall be broken down further by credit protection bought and credit protection sold EU_CCR6 Not applicable, AEC Group does not have any CDS in its portfolio at reference date k) estimate of alpha where the institution has received the permission of the competent authorities to use its own estimate of alpha in accordance with Article 284(9) EU_CCR1 Not applicable, AEC Group does not apply own estimates of scaling factor l) the disclosures included in point (e) of Article 444 and point (g) of Article 452 EU CCR3,

INTERNAL

		EU_CCR4 (n/a) - template not applicable, AEC Group does not apply IRB approach m) for institutions using the methods set out in Sections 4 to 5 of Chapter 6 of Title II Part Three, the size of their on- and off-balance-sheet derivative business as calculated in accordance with Article 273a(1) or (2), as applicable
440	8	Countercyclical Capital Buffers
EU_CCyB1 EU_CCyB2		a) geographical distribution of the exposure amounts, and risk-weighted exposure amounts of bank's credit exposures used as a basis for the calculation of its countercyclical capital buffer EU CCyB1 b) amount of bank-specific countercyclical capital buffer EU CCyB2
441	-	Indicators of Global Systemic Importance
		Institutions identified as G-SIIs in accordance with Article 131 of Directive 2013/36/EU shall disclose, on an annual basis, the values of the indicators used for determining the score of the institutions in accordance with the identification methodology referred to in that Article. Not applicable, AEC Group is not G-SII
442	9	Exposures to credit risk and dilution risk:
EU_CRB EU_CQ1 EU_CQ2 EU_CQ3 EU_CQ4 EU_CQ5 EU_CQ6 EU_CQ7 EU_CQ8 EU_CR1 EU_CR1-A EU_CR2 EU_CR2a		a) scope and definitions used for accounting purposes of 'past due' and 'impaired' and the differences, if any, between the definitions of 'past due' and 'default' for accounting and regulatory purposes EU_CRB b) a description of the approaches and methods adopted for determining specific and general credit risk adjustments EU_CRB c) information on the amount and quality of performing, non-performing and forborne exposures for loans, debt securities and off-balance-sheet exposures, including their related accumulated impairment, provisions, and negative fair value changes due to credit risk and amounts of collateral and financial guarantees received EU_CR1, EU_CR1-A, EU_CR2a, EU_CQ1, EU_CQ3, EU_CQ4, EU_CQ5, EU_CQ7, EU_CR2, EU_CR2a, EU_CQ2, EU_CQ6, EU_CQ8 – data in these templates is not disclosed since they reference to FINREP report that the Group is not obliged to fill, since its non performing exposure ratio is below 5% d) ageing analysis of accounting past due exposures EU_CQ3 e) gross carrying amounts of both defaulted and non-defaulted exposures, the accumulated specific and general credit risk adjustments, the accumulated write-offs taken against those exposures and the net carrying amounts and their distribution by geographical area and industry type and for loans, debt securities and off-balance-sheet EU_CQ4, EU_CQ5 f) any changes in the gross amount of defaulted on- and off-balance-sheet exposures, including, as a minimum, information on the opening and closing balances of those exposures, the gross amount of any of those exposures reverted to non-defaulted status or subject to a write-off EU_CR1, EU_CR2, EU_CR2a g) breakdown of loans and debt securities by residual maturity EU_CR1-A
443	10	Encumbered and Unencumbered Assets
EU_AE1 EU_AE2 EU_AE3 EU_AE4		- disclose information concerning their encumbered and unencumbered assets - use the carrying amount per exposure class broken down by asset quality and the total amount of the carrying amount that is encumbered and unencumbered (shall not reveal emergency liquidity assistance provided by central banks) - related liabilities, conditional liabilities or lent securities and assets, collateral held and issued own debt securities, except for covered bonds and collateralised securities that are encumbered - information on the meaning of encumbrance:
444	11	The Use of the Standardised Approach:
EU_CRD EU_CR4 EU_CR5 EU_CCR3		a) the names of the nominated external credit assessment institution (ECAIS) or Export Credit Agencies (ECAs) and the reasons for any changes EU_CRD b) the exposure classes for which each ECAI or ECA is used EU_CRD c) a description of the process used to transfer the issuer and issue credit assessments onto items not included in the trading book EU_CRD d) the association of the external rating of each nominated ECAI or ECA with the credit quality steps prescribed in the CRR regulation (Part Three, Title II, Chapter 2), if the association does not comply with the standard association scheme published by EBA (also the Bank of Slovenia) EU_CRD

INTERNAL

		e) the exposure values and the exposure values after credit risk mitigation (credit protection) associated with each credit quality step prescribed in Part Three, Title II, Chapter 2 of the CRR regulation as well as those deducted from own funds EU_CR4, EU_CR5, EU_CCR3
445	12	Market Risk Exposure
EU_MR1		a) disclose requirements separately for each risk referred to in points b) and c) of CRR Article 92(3) EU_MR1 b) own funds requirements for the specific interest rate risk of securitisation positions to disclose separately EU_MR1
446	13	Operational Risk Management
EU_ORA EU_OR1		a) approaches for the assessment of own funds requirements for operation risk that the institution qualifies for EU_ORA, EU_OR1 b) where the institution makes use of it, a description of the methodology set out in Article 312(2), which shall include a discussion of the relevant internal and external factors being considered in the institution's advanced measurement approach EU_ORA, EU_OR1 c) in the case of partial use, the scope and coverage of the different methodologies used EU_ORA, EU_OR1
447	6.2	Disclosure of key metrics
EU_KM1		a) composition of own funds and own funds requirements as calculated in accordance with Article 92 EU_KM1 b) total risk exposure amount as calculated in accordance with Article 92(3) EU_KM1 c) the amount and composition of additional own funds which the institutions are required to hold in accordance with point (a) of Article 104(1) of Directive 2013/36/EU, if applicable EU_KM1 d) combined buffer requirement which the institutions are required to hold in accordance with Chapter 4 of Title VII of Directive 2013/36/EU EU_KM1 e) leverage ratio and the total exposure measure as calculated in accordance with Article 429 EU_KM1 f) information in relation to their liquidity coverage ratio as calculated in accordance with the delegated act referred to in Article 460(1): i) the average or averages, as applicable, of their liquidity coverage ratio based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period, (ii) the average or averages, as applicable, of total liquid assets, after applying the relevant haircuts, included in the liquidity buffer pursuant to the delegated act referred to in Article 460(1), based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period, (iii) the averages of their liquidity outflows, inflows and net liquidity outflows as calculated pursuant to the delegated act referred to in Article 460(1), based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period EU_KM1 g) the following information in relation to net stable funding requirement as calculated in accordance with Title IV of Part Six: (i) the net stable funding ratio at the end of each quarter of the relevant disclosure period, (ii) the available stable funding at the end of each quarter of the relevant disclosure period, (iii) the required stable funding at the end of each quarter of the relevant disclosure period EU_KM1 h) own funds and eligible liabilities ratios and their components, numerator, and denominator, as calculated in accordance with Articles 92a and 92b and broken down at the level of each resolution group, where applicable Not applicable, AEC Group is not G-SII
448	14	Exposure to Interest Rate Risk on Positions Not held in the Trading Book
EU_IRRBBA EU_IRRBB1		a) changes in the economic value of equity calculated under the six supervisory shock scenarios referred to in Article 98(5) of Directive 2013/36/EU for the current and previous disclosure periods b) changes in the net interest income calculated under the two supervisory shock scenarios referred to in Article 98(5) of Directive 2013/36/EU for the current and previous disclosure periods

		c) description of key modelling and parametric assumptions, other than those referred to in points (b) and (c) of Article 98(5a) of Directive 2013/36/EU used to calculate changes in the economic value of equity and in the net interest income required under points (a) and (b) of this paragraph d) explanation of the significance of the risk measures disclosed under points (a) and (b) of this paragraph and of any significant variations of those risk measures since the previous disclosure reference date e) description of how institutions define, measure, mitigate and control the interest rate risk of their non-trading book activities for the purposes of the competent authorities' review in accordance with Article 84 of Directive 2013/36/EU, including: (i) a description of the specific risk measures that the institutions use to evaluate changes in their economic value of equity and in their net interest income, (ii) a description of the key modelling and parametric assumptions used in the institutions' internal measurement systems that would differ from the common modelling and parametric assumptions referred to in Article 98(5a) of Directive 2013/36/EU for the purpose of calculating changes to the economic value of equity and to the net interest income, including the rationale for those differences, (iii) a description of the interest rate shock scenarios that institutions use to estimate the interest rate risk, (iv) the recognition of the effect of hedges against those interest rate risks, including internal hedges that meet the requirements laid down in Article 106(3), (v) an outline of how often the evaluation of the interest rate risk occurs f) description of the overall risk management and mitigation strategies for those risks g) average and longest repricing maturity assigned to non-maturity deposits
449	-	Exposure to Securitisation Positions
EU-SEC1 EU-SEC2 EU-SEC3 EU-SEC4 EU-SEC5		Institutions calculating risk-weighted exposure amounts in accordance with Chapter 5 of Title II of Part Three or own funds requirements in accordance with Article 337 or 338 shall disclose the information separately for their trading book and non-trading book activities where relevant Not applicable, securitization transactions are not in place in AEC Group
449a	15	Climate related and Environmental risk
		From 28 June 2022, large institutions which have issued securities that are admitted to trading on a regulated market of any Member State, as defined in point (21) of Article 4(1) of Directive 2014/65/EU, shall disclose information on ESG risks, including physical risks and transition risks, as defined in the report referred to in Article 98(8) of Directive 2013/36/EU. The information referred to in the first paragraph shall be disclosed on an annual basis for the first year and biannually thereafter. AEC Group is large institution but has no publicly listed issuances. Nevertheless, based on ECB's Guide on climate related and environmental risks, it is outlined that ECB expects that C&E risks are material and related metrics should be embedded in disclosures under current prudential rules. In line with that, AEC Group discloses information related to C&E risks.
450	16	Remuneration Policy:
EU_REMA EU_REM1 EU_REM2 EU_REM3 EU_REM4 EU_REM5		a) information concerning the decision-making process used for determining the remuneration policy as well as the number of meetings held by the main body overseeing remuneration during the financial year, including, where applicable, information about the composition and the mandate of a remuneration committee, the external consultant whose services have been used for the determination of the remuneration policy and the role of the relevant stakeholders EU_REMA b) information on link between pay and performance EU_REMA c) the most important design characteristics of the remuneration system, including information on the criteria used for performance measurement and risk adjustment, deferral policy and vesting criteria EU_REMA d) the ratios between fixed and variable remuneration EU_REMA e) information on the performance criteria on which the entitlement to shares, options or variable components of remuneration is based EU_REMA f) main parameters and rationale for any variable component scheme and any other non-cash benefits EU_REMA g) aggregate quantitative information on remuneration, broken down by business area EU_REM5

INTERNAL

		h) aggregate quantitative information on remuneration, broken down by senior management and members of staff whose professional activities have a material impact on the risk profile of the institutions, indicating the following: (i) the amounts of remuneration awarded for the financial year, split into fixed remuneration including a description of the fixed components, and variable remuneration, and the number of beneficiaries; EU_REM1 (ii) the amounts and forms of awarded variable remuneration, split into cash, shares, share-linked instruments and other types separately for the part paid upfront and the deferred part; EU_REM1 (iii) the amounts of deferred remuneration awarded for previous performance periods, split into the amount due to vest in the financial year and the amount due to vest in subsequent years; EU_REM3 (iv) the amount of deferred remuneration due to vest in the financial year that is paid out during the financial year, and that is reduced through performance adjustments; EU_REM3 (v) the guaranteed variable remuneration awards during the financial year, and the number of beneficiaries of those awards; EU_REM2 (vi) the severance payments awarded in previous periods, that have been paid out during the financial year; EU_REM2 (vii) the amounts of severance payments awarded during the financial year, split into paid upfront and deferred, the number of beneficiaries of those payments and highest payment that has been awarded to a single person aggregate quantitative information on remuneration, broken down by senior management and members of staff whose actions have a material impact on the risk profile of the bank EU_REM2 i) the number of individuals being remunerated 1 million Euros or more per financial year, with remuneration between 1 million and 5 million Euros broken down into pay bands of 500,000 Euros and with remuneration of 5 million Euros and above broken down into pay bands of 1 million Euros EU_REM4 j) upon demand from the relevant Member State or competent authority, the total remuneration for each member of the management body or senior management EU_REMA k) information on whether the bank benefits from a derogation laid down in Article 94(3) of Directive 2013/36/EU EU_REMA 2. For large institutions, the quantitative information on the remuneration of institutions' collective management body referred to in this Article shall also be made available to the public, differentiating between executive and non-executive members EU_REMA
451	17	Leverage ratio
EU_LR1 EU_LR2 EU_LR3 EU_LRA		a) leverage ratio and how the institutions apply Article 499(2) EU_LR2
		b) breakdown of the total exposure measure referred to in Article 429(4), as well as a reconciliation of the total exposure measure with the relevant information disclosed in published financial statements EU_LR1, EU_LR2, EU_LR3
		c) where applicable, the amount of exposures calculated in accordance with Articles 429(8) and 429a(1) and the adjusted leverage ratio calculated in accordance with Article 429a(7) EU_LR2
		d) description of the processes used to manage the risk of excessive leverage EU_LRA
		e) description of the factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers EU_LRA
		2. large institutions shall disclose the leverage ratio and the breakdown of the total exposure measure referred to in Article 429(4) based on averages calculated in accordance with the implementing act referred to in Article 430(7) EU_LR2
		3. In addition to points (a) and (b) of paragraph 1 of this Article, large institutions shall disclose the leverage ratio and the breakdown of the total exposure measure referred to in Article 429(4) based on averages calculated in accordance with the implementing act referred to in Article 430(7) EU_LR2
451a	18	Liquidity Requirements
EU_LIQA EU_LIQ1		Institutions that are subject to Part Six shall disclose information on their liquidity coverage ratio, net stable funding ratio and liquidity risk management in accordance with this Article

INTERNAL

EU_LIQB EU_LIQ2		1.Information in relation to their liquidity coverage ratio as calculated in accordance with the delegated act referred to in Article 460(1)
		a) average or averages, as applicable, of their liquidity coverage ratio based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period;
		b) average or averages, as applicable, of total liquid assets, after applying the relevant haircuts, included in the liquidity buffer pursuant to the delegated act referred to in Article 460(1), based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period, and a description of the composition of that liquidity buffer;
		c) averages of their liquidity outflows, inflows and net liquidity outflows as calculated in accordance with the delegated act referred to in Article 460(1), based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period and the description of their composition
		2. Information in relation to their net stable funding ratio as calculated in accordance with Title IV of Part Six EU_LIQ1, EU_LIQB
		a) quarter-end figures of their net stable funding ratio calculated in accordance with Chapter 2 of Title IV of Part Six for each quarter of the relevant disclosure period;
		b) an overview of the amount of available stable funding calculated in accordance with Chapter 3 of Title IV of Part Six;
		c)an overview of the amount of required stable funding calculated in accordance with Chapter 4 of Title IV of Part Six
		3. Disclosure of arrangements, systems, processes, and strategies put in place to identify, measure, manage and monitor their liquidity risk in accordance with Article 86 of Directive 2013/36/EU EU_LIQ2
		4. Disclose the arrangements, systems, processes, and strategies put in place to identify, measure, manage and monitor their liquidity risk in accordance with Article 86 of Directive 2013/36/EU EU_LIQA
452	-	Use of the IRB Approach to Credit Risk
EU_CR6 EU_CR6-A EU_CR9 EU_CR9.1		Institutions calculating the risk-weighted exposure amounts under the IRB Approach shall disclose selected information. Not applicable, AEC Group does not apply IRB approach
453	19	Use of Credit Risk Mitigation Techniques
EU_CRC EU_CR3 EU_CR4 EU_CR7 EU_CR7-A		a) core features of policies and processes for on- and off-balance-sheet netting and an indication of the extent to which institutions make use of balance sheet netting EU_CRC
		b) core features of policies and processes for collateral evaluation and management EU_CRC
		c) a description of the main types of collateral taken by the bank EU_CRC
		d) for guarantees and credit derivatives used as credit protection, the main types of guarantors and credit derivative counterparty and their creditworthiness (credit quality) EU_CRC
		e) information about market or credit risk concentrations within the credit mitigation taken EU_CRC
		f) total exposure value not covered by any eligible credit protection and the total exposure value covered by eligible credit protection after applying volatility adjustments; separately for loans and debt securities and including a breakdown of defaulted exposures EU_CR3
		g) corresponding conversion factor and the credit risk mitigation associated with the exposure and the incidence of credit risk mitigation techniques with and without substitution effect. EU_CR4 EU_CR7-A (n/a) – template not applicable, AEC Group does not apply IRB approach
		h) on- and off-balance-sheet exposure value by exposure class before and after the application of conversion factors and any associated credit risk mitigation EU_CR4
		i) risk-weighted exposure amount and the ratio between that risk-weighted exposure amount and the exposure value after applying the corresponding conversion factor and the credit risk mitigation associated with the exposure; the disclosure set out in this point shall be made separately for each exposure class EU_CR4
		j) the risk-weighted exposure amount before and after recognition of the credit risk mitigation impact of credit derivatives; where institutions have received permission to use own LGDs and conversion factors for the calculation of risk-weighted exposure amounts, they shall make the disclosure set out in this point separately for the exposure classes subject to that permission

INTERNAL

		EU_CR7 Not applicable, AEC Group does not apply IRB approach
454	-	Use of the Advanced Measurement Approaches to Operational Risk
		The institutions using the Advanced Measurement Approaches set out in Articles 321 to 324 for the calculation of their own funds requirements for operational risk shall disclose a description of their use of insurance and other risk-transfer mechanisms for the purpose of mitigating that risk. Not applicable, AEC Group does not apply advanced measurement approach to operational risk.
455	-	Use of Internal Market Risk Models
EU_MRB EU_MR2-A EU_MR3 EU_MR4		Institutions calculating their capital requirements in accordance with Article 363 shall disclose selected information related to model used. Not applicable, AEC Group does not use internal models for capital requirements calculation
473a/468	5.1	IFRS 9 transitional arrangements
IFRS 9/ Article 468-FL		Data related to transitional capital rules applied by institution for introduction of new accounting standard for financial instrument measurement and classification (IFRS 9). Rule is published by EBA as of December 2017 and amended in June 2020: Temporary treatment of unrealised gains and losses measured at fair value through other comprehensive income (CRR, Article 468). Template: IFRS 9/Article 468-FL Not applicable, AEC Group does not use transitional arrangements in 2023
Appendixes		
EBA/GL/ 2018/10	Appendix 1	Disclosure of non-performing and forborne exposures

22. Appendix 3 - Attest of compliance of the Disclosure Report with Group policies and systems and controls

Senior management i.e heads of Group functions involved in Disclosure Report preparation hereby attest that disclosures required by EBA CRR are made in accordance with the formal policies and internal processes, systems and controls. Formal policies are listed in the Group internal document Group Policy on Disclosure.
